

Historical OSINT - Summarizing 2 Years of Webroot's Threat Blog Posts Research (2018-07-28 21:00)

It's been several years since I last posted a quality update at the industry's leading threat-intelligence gathering

[1]Webroot's Threat Blog following a successful career as lead security blogger and threat-intelligence analyst

throughout 2012-2014.

In this post I'll summarize two years worth of Webroot's Threat Blog research with the idea to provide readers

with the necessary data information and knowledge to stay ahead of current and emerging threats.

01. January - 2012

Introducing Threat Data - The World's Most Comprehensive Threats Database (2018-09-20 16:30)

Dear blog readers, I wanted to take the time and effort and introduce you to Threat Data - the World's Most Compre-

hensive Threats Database, a proprietary invite-only MISP-based data information and knowledge sharing community

managed and operated by me which basically represents the vast majority of proprietary threat intelligence research

that I produce on a daily basis these days.

Users and organizations familiar with my research may be definitely interested in considering the opportunity

to obtain access to Threat Data including a possible sample including a possible trial of the service.

Find below a sample FAQ about Threat Data and consider obtaining access to ensure that you and your orga-

nization remains on the top of its game including ahead of current and emerging threats.

01. How to request access including a possible trial including API access?

41

Approach me at ddanchev@cryptogroup.net

02. How do obtain automated access?

The database is delivered daily/weekly/quarterly in MISP-friendly JSON-capable format including STIX coverage.

03. How to request a sample?

Users interested in requesting a sample can approach me at dancho.danchev@hush.com and I'd be more than happy

to offer a recent threat intelligence research snapshot.

04. Tell me more about the pricing options?

Monthly subscriptions covering daily weekly and monthly updates start at \$4,000 including guaranteed access to

24-32 analysis on a daily basis including active in-house all-source analysis guaranteeing that your organization

remains on the top of its game by possessing the necessary data information and knowledge to stay ahead of current

and emerging threats.

05. What does the database cover?

- Russian Business Network coverage
- Koobface Botnet coverage
- Kneber Botnet coverage
- Hundreds of IOCs (Indicators of Compromise)
- Tactics Techniques and Procedures In-Depth Coverage
- Malicious and fraudulent infrastructure mapped and exposed
- Malicious and fraudulent Blackhat SEO coverage
- Malicious spam and phishing campaigns
- Malicious and fraudulent scareware campaigns
- Malicious and fraudulent money mule recruitment scams
- Malicious and fraudulent reshipping mule recruitment scams
- Web based mass attack compromise fraudulent and malicious campaigns

- Malicious and fraudulent client-side exploits serving campaigns

The database also offers active malvertising, scareware, rogueware, malware, phishing, spam, IM malware, mo-

bile malware, mac OS X malware, android malware, blackhat SEO, money mule recruitment, reshipping mule

recruitment, including ransomware coverage.

06. How often does it update?

Updates as issued on a daily weekly monthly basis guaranteeing unlimited access to in-house analysis all-source

analysis guaranteeing access to daily weekly and monthly updates.

Enjoy!

Historical OSINT - iPowerWeb Hacked Hundreds of Web Sites Affected (2018-10-19 18:17)

In 2008 it became evident that a widespread malware-embedded attack took place successfully affecting hundreds

of iPowerWeb customers potentially exposing hundreds of legitimate Web sites to a multi-tude of malicious software

courtesy of a well known **[1]Russian Business Network's hosting provider** - HostFresh.

In this post we'll profile the campaign provide actionable intelligence on the infrastructure behind it and dis-

cuss in-depth the tactics techniques and procedures of the cybercriminals behind it. We'll also establish a direct

connection between the campaign's infrastructure and the **[2]Russian Business Network**.

Malicious URL: `hxxp://58.65.232.33/gpack/index.php`

Related malicious URIs known to have participated in the campaign - `hxxp://58.65.232.25/counter/getexe.php?h-`

`=11 hxxp://58.65.232.25/counter/getfile.php?f=pdf`

We'll continue monitoring the campaign and post updates as soon as new developments take place.

Historical OSINT - Gumblar Botnet Infects Thousands of Sites Serves Adobe Flash Exploits (2018-10-19

22:46) According to **[1]security researchers** the **[2]Gumblar botnet** is making a comeback successfully affecting thousands of users globally potentially compromising the confidentiality availability and integrity of the targeted host to a

multi-tude of malicious client-side exploits serving domains further dropping malicious software on the affected hosts.

In this post we'll provide actionable intelligence on the infrastructure behind it and discuss in-depth the tac-

tics techniques and procedures of the cybercriminals behind it.

Malicious URLs known to have participated in the campaign:

hxxp://ncenterpanel.cn/php/unv3.php

hxxp://ncenterpanel.cn/php/p31.php

Related malicious MD5s known to have participated in the campaign:

MD5: 3f5b905c86d4dcaab9c86edddff1e02c7

MD5: 61461d9c9c1954193e5e0d4148a81a0c

MD5: 65cd1da3d4cc0616b4a0d4a862a865a6

MD5: 7de29e5e10adc5d90296785c89aeabce

Sample URL redirection chain:

Historical OSINT - Latvian ISPs, Scareware, and the Koobface Gang Connection (2018-10-20 22:34)

It's 2010 and we've recently stumbled upon yet another malicious and fraudulent campaign courtesy of the Koobface

gang actively serving fake security software also known as scareware to a variety of users with the majority of

malicious software conveniently parked within
79.135.152.101 - AS2588, LatnetServiss-AS LATNET ISP
successfully

hosting a diverse portfolio of fake security software.

In this post, I'll provide actionable intelligence on the infrastructure behind the campaign and discuss in-depth

the tactics techniques and procedures of the cybercriminals behind it.

Sample malware known to have participated in the campaign:

installer.1.exe - MD5: 4ab2cb0dd839df64ec8d682f904827ef
- Trojan.Crypt.ZPACK.Gen; Mal/FakeAV-CQ - Result: 9/40

(22.50 %)

Related malicious phone back C &C server IPs:

hxxp://av-plusonline.org/install/avplus.dll

hxxp://av-plusonline.org/cb/real.php?id=

Related malicious MD5s known to have participated in the campaign:

avplus.dll - MD5: 57c79fb723fcbf4d65f4cd44e00ff3ed -
FakeAlert-LF; Mal/FakeAV-CL - Result: 6/39 (15.39 %)

It's gets even more interesting as **hxxp://fast-payments.com** - 91.188.59.27 is parked within Koobface bot-

net's 1.0 phone back locations (**hxxp://urodinam.net**) and is also hosted within the same netblock at 91.188.59.10.

Sample related malicious URLs known to have participated in the campaign:

hxxp://urodinam.net/33t.php?stime=125558

- hxxp://91.188.59.10/opa.exe -MD5:
d4aacc8d01487285be564cbd3a4abc76 -
Downloader.VB.7.S; Mal/Koobface-B -

Result: 10/40 (25 %)

Once executed a sample malware phones back to the following malicious C &C server IPs:

hxxp://aburvalg.com/new1.php - 64.27.0.237

- hxxp://fucking-tube.net

The following domains use it as a name server:

hxxp://ns1.addedantivirus.com

Historical OSINT - Massive Scareware Dropping Campaign Spotted in the Wild (2018-10-20 22:38)

It's 2008 and I've recently spotted a currently circulating malicious and fraudulent scareware-serving malicious

domain portfolio which I'll expose in this post with the idea to share actionable threat intelligence with the security

community further exposing and undermining the cybercrime ecosystem the way we know it potentially empowering

security researchers and third-party vendors with the necessary data to stay ahead of current and emerging threats.

Historical OSINT - Massive Blackhat SEO Campaign Spotted in the Wild Drops Scareware (2018-10-21 23:55)

It's 2008 and I've recently stumbled upon a currently active malicious and fraudulent blackhat SEO campaign

successfully enticing users into falling victim into fake security software also known as scareware including a variety

of dropped fake codecs largely relying on the acquisition of legitimate traffic through active blackhat SEO campaigns

in this particular case various North Korea news including Mike Tyson's daughter themed campaigns.

Historical OSINT - A Diversified Portfolio of Fake Security Software (2018-10-22 13:33)

It's 2010 and I've recently stumbled upon a currently active and circulating malicious and fraudulent portfolio of

fake security software also known as scareware potentially enticing hundreds of thousands of users to a multitude

of malicious software with the cybercriminals behind the campaign potentially earning fraudulent revenue in the

process of monetizing access to malware-infected hosts largely relying on the utilization of an affiliate network-based

type of revenue sharing scheme.

Historical OSINT - Malicious Economies of Scale - The Emergence of Efficient Platforms for Exploitation -

2007 (2018-10-22 16:23)

Dear blog readers it's been several years since I last posted a quality update following my **[1]2010 disappearance**. As

it's been quite a significant period of time since I last posted a quality update I feel it's about time I post an quality

update by detailing the Web Malware Exploitation market segment circa 2007 prior to my visit to the GCHQ as an

independent contractor with the **[2]Honeynet Project**.

In this post I'll discuss the rise of Web malware exploitation kits circa 2007 and offer in-depth discussion on

the current and emerging tactics techniques and procedures (TTPs) of the cybercriminals behind it. With cyber-

criminals continuing to actively rely on the exploitation of patched and outdated vulnerabilities and with end users

continuing to actively utilize unpatched and outdated third-party software it shouldn't be surprising that today's

botnets remain relatively easy to generate and orchestrate for the purpose of committing financial fraud.

Malicious Economies of Scale literally means utilizing attack techniques and exploitation approaches to effi-

ciently, yet cost and time effectively, infect or abuse as many victims as possible, in a combination with an added

layer of improved metrics on the success of the campaigns. What are the most popular web exploitation kits that

malicious parties use to achieve this? Which are the most popular vulnerabilities used in the majority of the kits?

What are the most popular techniques for embedding malware? This white paper will outline this efficiency-centered

attack model, and will cover web application vulnerabilities, client-side vulnerabilities, malvertising and black hat

SEO (search engine optimization).

An overview of the threats posed by rising number of malware embedded sites, with a discussion of the ex-

ploitation techniques and kits used, as well as detailed summaries of all the high-profile such attacks during 2007.

01. Reaching the Efficiency Scale Through a Diverse Set of Exploited Vulnerabilities

2007 was the year in which client-side vulnerabilities significantly replaced server-side ones as the preferred

choice of malicious attackers on their way to achieve the highest possible attack success rate, while keeping their in-

vestment in terms of know-how and personal efforts to the minimum. Among the most successful such attacks during

2007 was Storm Worm, the perfect example that the use of outdated and already patched vulnerabilities can result

in aggregating the world's largest botnet according to industry and independent researchers' estimates. By itself, this

attack technique is in direct contradiction with the common wisdom that zero day vulnerabilities are more dangerous

than already patched ones, however, the gang behind Storm Worm quickly envisioned this biased statement as false,

and by standardizing the exploitation process with the help of outdated vulnerabilities achieved an enormous success.

Years ago, whenever, a vulnerability was found and exploit code released in the wild, malicious attackers used

to quickly released a do-it-yourself exploitation kit to take advantage of a single exploit only. Nowadays, that's no

longer the case, since by using a single exploit whether an outdated, or zero day one, they're significantly limiting the

probability for a successful attack, and therefore the more diverse and served on-the-fly is the set of exploits used in

an attack, the higher would the success rate be.

What was even more interesting to monitor during 2007, was the rise of high-profile sites serving malware,

and the decline of malware coming from bogus ones. From the **[3]Massive Embedded Malware Attack at a large**

Italian ISP to the Bank of India, the Syrian Embassy in the U.K, the U.S Consulate in St. Petersburg, China's CSIRT,

Possibility Media's entire portfolio of E-zines, to the French government's site related to Lybia, these trusted web

sites were all found to serve malware though an embedded link pointing back to the attacker's malicious server. Let's

clarify what malicious economies of scale means, and how do they do it.

02. What is malicious economies of scale, and how is it achieved?

121

Malicious economies of scale is a term I coined in 2007 to summarize the ongoing trend of efficiently attacking online users, by standardizing the exploitation process, and by doing so, not just lowering the entry barriers into

the process of exploiting a large number of users, but also, maintaining a rather static success rate of infections.

Malicious economies of scale is the efficient way by which a large number of end users get infected, or have their

online abused, with the malicious parties maintaining a static attack model. It's perhaps more important to also

describe how is the process achieved at the first place? The first strategy applied has to do with common sense in

respect to the most popular software applications present at the end user's end, and the first touch-point in this case

would be the end user's Internet browser.

Having its version easily detected and exploit served, one that's directly matching the vulnerable version, is

among the web exploitation kits main functionalities. Let's continue with the second strategy, namely to increase the

probability of success. As I've already pointed out, do-it-yourself single vulnerability exploiting tools matured into

web exploitation malware kits, now backed up with a diverse set of exploits targeting different client-side applications,

which in this case is the process of increasing the probability of successful infection. The third strategy has to do

with attracting the traffic to the malicious server, that as I've already discussed is already automatically set to

anticipate the upcoming flood of users and serve the malware through exploiting client-side software vulnerabilities

on their end. This is mainly done through exploiting remote file inclusion vulnerabilities within the high-profile

targets, or through remotely exploitable web application vulnerabilities to basically embed a single line of code,

or an obfuscated javascript that when deobfuscated will load the malicious URL in between loading the legitimate site.

Popular Malware Embedded Attack Tactics

This part of the article will briefly describe some of the most common attack tactics malicious parties use to

embed links to their malicious servers on either high-profile sites, or any other site with a high pagerank, something

they've started measuring as of recently according to threat intell assessment on an automated system to embed

links based on a site's popularity.

• The "pull" Approach - Blackhat SEO, Harnessing the Trusted Audience of a Hacked Site

In this tactic, malicious parties entirely rely on the end users to reach their malicious server, compared to the second

tactic of “pushing” the malicious links to them. This is primarily accomplished through the use of Blackhat SEO

tools generating junk content with the idea to successfully attract search engine traffic for popular queries, thus

infecting anyone who visits the site, who often appear within the first twenty search results. The second “pull”

approach such tactic is harnessing the already established trust of a site such as major news portal for instance,

and by embedding a link to automatically load on the portal, have the users actually “pull” the malware for themselves

• **The “push” Approach - Here’s Your Malware Embedded Link**

The “push” approach’s success relies in its simple logic, with end users still worrying about downloading or clicking on

email attachments given the overall lack of understanding on how to protect from sites serving malware, it’s logical

to consider that basically sending a link which once visited will automatically infect the visitor though exploiting a

client-side vulnerability, actually works. Storm Worm is the perfect example, and to demonstrate what malicious

economies of scale means once again, it’s worth mentioning Storm’s approach of having an already infected host

act as an infection vector itself, compared to its authors having to register multiple domains and change them

periodically. The result is malware embedded links exploiting client-side vulnerabilities in the form of an IP address,

in this case an already infected host that's now aiming to infect another one

122

• **Automatically Exploiting Web Application Vulnerabilities - Mass SQL Injection Attacks**

As I've already pointed out, malicious parties are not just efficiently scanning for remotely exploitable web application

vulnerabilities or looking for ways to remotely include files on any random host, they've started putting efforts into

analyzing the page rank, and overall popularity of a site they could exploit. This prioritizing of the sites to be used for

a "pull" tactic is aiming to achieve the highest possible success rate by targeting a high-trafficked site, where even

though the attack can be detected, the "window of opportunity" while the users were also accessing the malicious

server could be far more beneficial than having a permanent malware link on a less popular site for an indefinite

period of time.

• **Malicious Advertisements - Malvertising**

Among the most popular traffic acquisition tactics nowadays remain the active utilization of legitimate Web properties

for the purpose of socially engineering an ad network provider into featuring a specific malware-serving advertising

at the targeted Web site including active Web site compromise for the purpose of injecting rogue and malicious ads

on the targeted host.

Thanks to a vibrant DIY (do-it-yourself) Web malware exploitation kit culture including the active utilization of various

DIY Web site exploitation and malware-generating cybercriminals continue actively utilizing stolen and compromised

accounting data for the purpose of injecting malicious scripts on the targeted host further compromising the confidentiality availability and integrity of the targeted host.

- **Harvesting accounting data from malware infected hosts**

Having an administrator access to a domains portfolio, or any type of access through a web application backdoor or direct FTP/SSH, has reached its commercial level a long time ago. In fact, differentiated pricing applies in this case, on the basis of a site's page rank, whereas I've stumbled upon great examples of "underground goods liquidity" as a process, where access to a huge domains portfolio through a hacked Cpanels is being offered for cents with the seller's main concern that cents are better than nothing, nothing in the sense that she may lose access to the Cpanel before its being sold and thus ends up with nothing. Now, let's discuss the most popular malware exploitation kits currently in the wild.

The Most Popular Web Malware Exploitation Kits

Going into detail about the most common vulnerabilities used in the multitude of web malware exploitation

kits could be irrelevant from the perspective of their current state of "modularity", that is, once the default installa-

tion of the kit contains a rather modest set of exploits, the possibility to add new exploits to be used has long reached

the point'n'click stage. Even worse, localizing the kits to different languages further contributes to their easy of use

and acceptance on a large scale, just as is their open source nature making it easy for coders to use a successful kit's

modules as a foundation for a new one – something's that's happening already, namely the difference between a

copycat kit and an original coded from scratch one. Among the most popular malware kits remain :

123

- **A Brief Overview of MPack, IcePack, Zunker, Advanced Pack and Fire Pack**

During 2007, Mpack emerged as the most popular malware exploitation kit. Originally available for purchase, by

the time copies of the kit started leaking out, anyone from a script kiddie to a pragmatic attacker have obtained

copy of it. Mpack's main strength is that of its well configured default installation, which in a combination with a

rather modest, but then again, modular set of exploits included, as well as its point'n'click level of sophistication

automatically turned it into the default malware kit. Mpack's malware kit has been widely used on nearly all of the

high-profile malware embedded attacks during 2007, however, its popularity resulted in way too much industry

attention towards its workings, and therefore, malicious parties starting coming up with new kits, still using Mpack

as the foundation at least from a theoretical perspective.

The list is endless, the Nuclear Malware kit, Metaphisher, old version of the WebAttacker and the Rootlauncher kit,

with the latest and most advanced innovation named the Random JS Exploitation Kit. Compared to the previous one,

this one is going a step beyond the usual centralized malicious server.

With malicious parties now interested in controlling as much infected hosts with as little effort as possible,

client-side vulnerabilities will continue to be largely abused in an efficient way through web malware exploitation

kits in 2008. The events that took place during 2007, clearly demonstrate the pragmatic attack approaches malicious

parties started applying, namely realizing that an outdated but unpatched on a large scale vulnerability is just as

valuable as a zero day one.

Pay-Per-Exploit Acquisition Vulnerability Programs - Pros and cons? (2018-10-22 17:47)

As [1]**ZERODIUM** starts paying premium rewards to security researchers to acquire their previously unreported zero-

day exploits affecting multiple operating systems software and/or devices a logical question emerges in the context of

the program's usefulness the potential benefits including potential vulnerabilities within the actual acquisition process

- how would the program undermine the security industry and what would be the eventual outcome for the security

researcher in terms of

[2]fueling growth in the cyber warfare market segment

?

In this post I'll discuss the m

arket segment for p

ay-per-exploit

acquisition progr

ams

and discuss in-depth the current exploit-
acquisition methodology utilized by different vendors
and provide in-depth discussion on v
arious over-the-counter
acquisition methodologies
applied by m
alicious
att
ackers on their w
ay to monetize
access to m
alw
are-infected hosts while compromising the confidenti
ality
av
ail
ability
and integrity of the t
argeted

host including
an
active discussion on the ongoing
and potenti
al we
aponiz
ation of zero d
ay vulner
abilities int the context of tod
ay's cyber w
arf
are world.

Having greatly realized the potential of acquiring zero day vulnerabilities for the purpose of actively exploiting end

users malicious actors have long been aware of the [3]**over-the-counter acquisition market model**

further enhancing their capabilities when launching malicious campaigns. Among the most widely [4]**spread myth**

about zero day vulnerabilities is the fact that

[5]zero day vulnerabilities arethe primary growth factor of the cybercrime ecosystem

further resulting in a multitude of malicious activity targeting end users.

With vendors continuing to est

ablish the found

ations for

active vulner

a bility and exploit

acquisition progr

ams third-p

arty vendors

and rese

arch org

aniz

ations continue successfully disintermedi

ating the vendor's m

ajor vulner

ability

126

and exploit

acquisition progr

ams successfully resulting in the l
aunch
and est
ablishment of third-p
arty services
and products further popul
ating the security-industry with rel
ated products
and services potenti
ally
acquiring "know-how"
and relev
ant vulner
ability
and exploit inform
ation from m
ajor vendors further l
aunching rel
ated comp
anies

and services potenti
ally empowering third-p
arty rese
archers vendors
and individu
als including n
ation-st
ate
actors with potenti
al we
aponiz
ation c
ap
127
abilities potenti
ally le
ading to successful t
arget-
acquisition pr
actices on beh

alf of third-p

arty rese

archers

and individu

als.

Becoming

a t

arget in the widespread

context of third-p

arty vendors

and rese

archers might not be the wisest

appro

ach when undermining potenti

al rese

arch

and in-house rese

arch

and benchm

arking

activities in terms of evaluating

and responding to vulnerabilities

abilities

and exploits. Vendors looking for ways to efficiently improve the overall security

and product performance in terms of security should consider basic internal

128

al benchmarking practices

and should also consider a possible incentive-based type of vulnerability and exploit reward-type of

revenue-sharing program potentially rewarding company employees and researchers with the necessary tools and

incentives to find and discover and report security vulnerabilities and exploits.

Something else worth pointing out in terms of vulnerability research and exploit discovery is a process which can be

best described as the life-cycle of a zero day vulnerability and exploit which can be best described as a long-run

process utilized by malicious and fraudulent actors successfully utilizing client-side exploits for the purpose of

successfully dropping malicious software on the hosts of the targeted victims which often rely on outdated and

patched vulnerabilities and the overall misunderstanding that zero day vulnerabilities and exploits are the primary

growth factor of the security-industry and will often rely on the fact that end users and enterprises are often

unaware of the basic fact that cybercriminals often rely on outdated and patched vulnerabilities successfully

targeting thousands of users globally on a daily basis.

What used to be a market-segment dominated by DIY (do-it-yourself) exploit and malware-generating tools is

today's modern market-segment dominated by Web malware-exploitation kits successfully affecting thousands of

users globally on a daily basis. In terms of Web-malware exploitation kits among the most common misconceptions

regarding the utilization of such type of kits is the fact that the cybercriminals behind it rely on newly discovered

exploits and vulnerabilities which in fact rely on **[6]outdated and already patched security vulnerabilities** and

exploits for the purposes of successfully enticing thousands of users globally into falling victim into

social-engineering driven malicious and fraudulent campaigns.

Despite the evident usefulness from a malicious actor's point of view when launching malicious campaigns malicious

actors continue utilizing outdated vulnerabilities for the purpose of launching malicious campaigns further utilizing

a

multi-tude of social engineering attack vectors to enhance the usefulness of the exploitation vector. Another crucial aspect of the pay-per-exploit acquisition vulnerability model is, the reliance on outdated and unpatched vulnerabilities for the purpose of launching malicious campaigns further relying on the basic fact that on the majority of occasions end users fail to successfully update their third-party applications often exposing themselves to a variety of successful malicious campaigns utilizing outdated and unpatched vulnerabilities.

We expect to continue observing an increase in the pay-per-exploit acquisition model with, related acquisition model participants continuing to acquire vulnerabilities further fueling growth into the market segment. We expect that malicious actors will adequately respond through over-the-counter acquisition models including the utilization of outdated and unpatched vulnerabilities. End users are advised to continue ensuring that their third-party applications are updated to build a general security awareness and to ensure that they're running a fully patched antivirus solution.

Cyber Security Project Investment Proposal - DIA Needipedia - Fight Cybercrime and Cyber Jihad With Sensors - Grab Your Copy Today! (2018-12-16 13:52)

Dear blog readers, I decided to share with everyone a currently pending project investment proposal regarding the upcoming launch of a proprietary Technical Collection analysis platform with the project proposal draft available on

request part of **[1]DIA's Needipedia** Project Proposal Investment draft or eventually through the **[2]Smith Richardson Foundation**.

In case you're interested in working with me for the purpose of implementing the project solution including a

possible investment proposal on your behalf – that also includes a possible VC or an angel investor introduction – I

can be reached at dancho.danchev@hush.com

Looking forward to receiving your comments questions feedback and general remarks including possible in-

vestment proposal requests. Happy Holidays!

Enjoy!

01. Executive summary

The Obmonix platform aims to build the world's most versatile and comprehensive sensor network for intercepting

cybercrime and cyber jihad activity on a global scale successfully positioning the project as a leading in-house built

provider for actionable intelligence within the Intelligence Community.

02. What are you trying to do?

The Obmonix platform aims to build the world's most versatile and comprehensive sensor network for intercepting

132

cybercrime and cyber jihad activity successfully positioning the platform as a leading in-house provider of actionable intelligence within the Intelligence Community.

03. How is it currently done?

Largely relying on a selected set of outsourced intelligence-gathering providers the Intelligence Community overall

reliance on commercial intelligence gathering providers has successfully positioned the Intelligence Community with

a limited sight in terms of pro-active and systematic response to cybercrime and cyber jihad events globally.

04. What's new?

Largely relying on the utilization of multiple interception vectors including hybrid-based type of sensor networks the

Intelligence Community is successfully positioned to successfully intercept and proactively respond to a growing set

of cybercrime and cyber jihad events globally.

05. Who cares?

The Intelligence Community largely positioned to take advantage of a growing set of technologies for the purpose

of pro-actively responding to a growing set of cybercrime and cyber jihad events globally is ultimately empowered

to take advantage of modern hybrid-based type of sensor networks for the purpose of successfully intercepting and

responding to a growing set of cybercrime and cyber jihad events globally.

06. What are the risks?

Successfully positioning the provider as a leading provider for actionable intelligence in terms of cybercrime and

cyber jihad events globally within the Intelligence Community will successfully position the Obmonix platform and

its operator as a leading provider of actionable intelligence within the Intelligence Community.

Transmittal Letter

My name is Dancho Danchev I'm an internationally recognized cybercrime researcher security blogger and

threat intelligence analyst currently maintaining some of the industry's leading threat intelligence gathering

information-sharing resources having successfully contributed to the overall demise of cybercrime internationally

having successfully monitored analyzed and processed some of the industry's major nation-state and malicious actor

type of malicious campaigns over the last decade leading me to a successful career as a cybercrime researcher

security blogger and threat intelligence analyst leading me to a successful launch of my newly launched startup

named Disruptive Individuals and the Obmonix - Cybercrime and Cyber Jihad Fighting Sensor Network.

133

Having successfully pioneered my own methodology for processing threat intelligence data including active

dissemination of threat intelligence data to a variety of sources including an in-depth understanding of the Intel-

ligence Cycle I'm certain that based on my experience the time has come to establish a professional and working

relationship with a government-private sector enterprise leading me to a successful project proposal within the

Intelligence Community and the security industry.

My initial goal for submitting a project proposal is to ensure that the Intelligence Community remains on the

top of its game and that the United States remains ahead of adversaries looking to profit from its economic might

including the successful compromise of its infrastructure potentially targeting the life's and well-being of its citizens globally.

Largely relying on a set of industry-leading contacts my initial idea is to ensure that the Intelligence Commu-

nity remains actively empowered with the world's largest and most comprehensive platform for monitoring profiling

and proactively responding to malicious nation-state malicious actors type of cybercrime and cyber-jihad activity

globally through the successful establishing of a government-private sector type of partnership leading me to a

successful launch of my own company leading me to a successful project-based type of project proposal.

Having actively contributed to the overall demise of cybercrime internationally through the last decade I'm

certain that my expertise ambition and expertise in the field will successfully contribute to the Intelligence Commu-

nity's overall mission including a currently active project within the Intelligence Community and the security industry.

I sincerely hope that my project proposal will be eventually funded leading me to become an active partici-

pant within the Intelligence Community with a currently active project within the Intelligence Community and the security-industry.

134

Company Overview

The following brief will provide a detailed summary of the company overview including key success factors and a project taxonomy.

Disruptive Individuals is a research-intensive data-driven company successfully establishing the world's largest

135

snapshot of malicious cybercrime activity for the purpose of offering the industry the world's most versatile portfolio of malicious cybercrime-driven services successfully positioning itself as the world's leading provider of real-time

intelligence-driven services and product portfolio including cybercrime-research data malicious activity profiling

services and custom-tailored intelligence assessments successfully positioning the company as the world's leading

provider of cybercrime-data driven research-intensive intelligence data-driven company.

Key Success Factors

- the platform will be ultimately capable of establishing the industry's largest data set of cybercrime activity

for the purpose of real-time monitoring and profiling of malicious cybercrime activity successfully infiltrating

the majority of cybercrime forum communities successfully establishing the foundations for an intelligence

gathering process

- the platform will be ultimately capable of real-time forum data localization for the purpose of successfully es-

tablishing the foundations for a successful intelligence gathering process

- the platform will be ultimately capable of establishing the foundations for real-time monitoring and profiling

of malicious activity including forum member data successfully establishing the foundations for a successful

intelligence gathering process

- the platform will be ultimately capable of establishing the world's largest data set of historical cybercrime activity

successfully establishing the foundations for a successful intelligence gathering process

Return on Investment

- research-based forum activity driven intelligence feeds

- the company will be ultimately capable of offering subscription based type of intelligence driven services in-

cluding intelligence and data-driven cybercrime and malicious-activity capable feeds

- community-driven data processing capabilities
- the company will be ultimately capable of offering public feeds to include the necessary data for the purpose of

establishing an active community-based intelligence-data driven type of intelligence-data driven type of services

and feeds

- intelligence feed subscription type of managed intelligence-feed driven services
- the company will be ultimately capable of offering tailored intelligence-driven data feeds successfully empower-

ing security enthusiasts security experts researchers and government contractors with the necessary data and

expertise to offer an insight into the company's vast network of data and intelligence driven type of services

Company Data Project Taxonomy

This intelligence brief will details the basic company project taxonomy structure for the purpose of establishing the

foundations for a successful data and intelligence-driven type of research based type of cybercrime and malicious-

activity tracking activity to include but not limited to cybercrime community forum data and active social media mon-

itoring and, profiling capabilities.

Cybercrime Sensor Network

136

This intelligence brief will details the basic company project taxonomy structure for the purpose of establishing the foundations for a successful data and intelligence-driven type of research based type of cybercrime and malicious-activity tracking activity to include but not limited to cybercrime community forum data and active social media mon-

itoring and profiling capabilities.

Explanation of Honeypot Technology

Honeypot technology greatly ensures that actionable and real-time data of jihadist activities can be acquired profiled

and analyzed acting as an early warning system for jihadist activity online. It relies on the systematic positioning of

misconfigured network devices to better allow the use of monitoring sensors attracting malicious traffic leading to an

eventual compromise allowing for better understanding of the motivation and capability estimation of the attacker

including active motivation and capabilities type of attribution leading to the production of actionable real-time type

of intelligence type of research and analysis type of data.

Honeypot Deployment Strategy

Honeypot technology greatly ensures that actionable and real-time data of jihadist activities can be acquired profiled

and analyzed acting as an early warning system for jihadist activity online.

• Fake Newspaper - Al-Jihah

The initial idea behind setting up a fake newspaper (in Persian, Arabic) would be to establish the foundation for a

successful deceptive early warning system sensor further ensuring that actionable and real-time jihadist activity data

can be collected profiled and interpreted for producing real-time intelligence summary reports. Daily updates with

pro-jihadist material would ensure the quality acquisition of traffic including potential deceptive campaigns to be

intercepted profiled and analyzed acting as an early warning system sensor further ensuring the collection of actionable

real-time jihadist activities data.

The Al-Jilah newspaper would act as a central repository for, various anti-jihad content successfully positioning the

paper as a primary attack target for cyber jihadist online successfully increasing the probability for a successful

attack

and eventually collecting and interpreting the attack data. The Al-Jilah newspaper would act as a central repository

of anti-jihad content and would be localized in Persian in Arabic successfully penetrating local and highly segmented

markets for the purpose of increasing the probability of a successful attack.

Various public placement strategy in terms of positioning the honeypot technology within the eventual attack

compromise activity would include active search engine optimization techniques successfully leading to a great

degree of capability estimation attack traffic and would also result in eventual direct forum placement within various

prominent jihadist activity online forum communities.

139

• **Fake Bank - Arabah Financing**

The initial idea behind setting up a fake bank (in Persian, Arabic) would be to establish the foothold of a deceptive

campaign ensuring the collection of actionable real-time time jihadist data to be analyzed and profiled. Successfully

positioning the bank within the network assets acquisition would ensure the collection of actionable and real-time

jihadist data further ensuring the successful interception of jihadist activities online.

The initial idea behind setting up a fake bank would be to successfully position a fake Web site successfully resulting

in the active deployment of honeypot appliance technologies for the purpose of monitoring and profiling various

jihadist activity online. Successfully setting up a fake bank in Persian and Arabic would result in the active penetration

of various market segment properties successfully resulting in the active profiling and monitoring of jihadist activity

online.

Successfully setting up a fake bank would result in the active publication of content inter-related news releases

emphasizing on major localized and segment released type of content successfully resulting in the active profiling

and monitoring of various jihadist activity online. Successful positioning in terms of points of contact would ensure

active phishing and malware attack profiling and monitoring successfully resulting in active profiling and monitoring

of jihadist activity online.

- **Fake university - Abkazah University**

The initial idea behind setting up a fake university (in Persian, Arabic) would be to establish the foothold of a deceptive

campaign ensuring the collection of actionable real-time time jihadist data to be analyzed and profiled. Successfully

positioning the bank within the network assets acquisition would ensure the collection of actionable and real-time

jihadist data further ensuring the successful interception of jihadist activities online. Successful positioning in terms

of points of contact would ensure active phishing and malware attack profiling and monitoring successfully resulting

in active profiling and monitoring of jihadist activity online.

The initial idea of setting up a fake university would result in the active profiling and monitoring of various jihadist

community type of jihadist activity online successfully positioning a localized in Persian and Arabic fake university

successfully resulting in the active profiling and monitoring of jihadist activity online. Sample fake university content

type of localized fake university portfolio of facilities and educational courses would result in the active positioning

for a localized and segmented active profiling and monitoring of jihadist activity online.

It would consist of active SCADA research and cyber security type of research and analysis facility allowing the active

monitoring of malicious activity, for the origin source country Iran, Pakistan, Saudi Arabia, Iraq and Syria. Successful

positioning in terms of points of contact would ensure active phishing and malware attack profiling and monitoring

successfully resulting in active profiling and monitoring of jihadist activity online.

- **Fake Company - Ostan Industries**

The initial idea behind setting up a fake company would be to successfully intercept and profile actionable real-time

jihadist activities online to successfully intercept and profile various jihadist activities online. The initial idea behind

setting up a fake company would be to position a SCADA type of infrastructure localized in Persian, Arabic for the

purpose of successfully profiling and monitoring various jihadist activity online.

With a successful placement and active content generating localized in Persian, Arabic a fake company deployment

using honeypot appliance technology would result in active capability estimation and profiling of various jihadist

140

activity online. Successful positioning in terms of points of contact would ensure active phishing and malware attack profiling and monitoring successfully resulting in active profiling and monitoring of jihadist activity online.

Cyber Jihad Sensor Network

This intelligence brief will details the basic company project taxonomy structure for the purpose of establishing the

foundations for a successful data and intelligence-driven type of research based type of cybercrime and malicious-

activity tracking activity to include but not limited to cybercrime community forum data and active social media mon-

itoring and profiling capabilities.

Detailed Project Funding Stages Information

The initial stage of the project will consist of selective and timely purchase of all the necessary appliances in-

cluding the timely localization and successful acquisition of fake Web sites honeypot solutions including the active

acquisition of network assets for the purpose of successfully honeypot solution placement.

- The main objective of the initial phase would be to acquire all the necessary equipment for the purpose of

setting up the foundations for the Obmonix platform. The equipment will be acquired in a timely fashion largely

relying on a selected set of proprietary industry leading set of contacts.

- The main objective of the next phrase would be to ensure that the equipment is placed in a secure location

and is properly maintained for the purpose of ensuring that the operator is capable of operating the Obmonix

platform in a secure way.

- The main objective of the next phase would be to establish the foundations of the world's largest data set of in-

telligence data for the purpose of ensuring that the Obmonix platform is capable of processing and intercepting

the necessary data.

- The main objective of the next phase would be to acquire the necessary proprietary service based solutions

that would empower the operator with the necessary tools to process and intercept data.

196

- The main objective of the next phase would be to process and intercept the world's largest data set of cybercrime and cyber jihad data.

Detailed Project Funding Phase Information

01. The initial stage of the project will consist of selective and timely purchase of all the necessary appliances

including the timely localization and successful acquisition of fake Web sites honeypot solutions including the active

acquisition of network assets for the purpose of successfully honeypot solution placement.

- Associated deliverables will include access to proprietary technology the ability to associate long-term task

including the ability to set the foundation for the Obmonix platform including eventual commercialization of the

Obmonix platform further enhancing the operator's ability to continue providing the Intelligence Community

with the necessary data to proactively respond to a growing set of malicious nation-state and malicious actors

type of cybercrime and cyber-jihad activity globally.

02. The next stage will consist of active placement of the required equipment in a secure location including the

placement of active secure measures in place to ensure that the Obmonix operator remains work in a secure location

including premise.

- Associated deliverables will include secure work place including the ability to empower the operator with the

necessary data to perform various operator activity ensuring global presence for Intelligence Community mem-

bers and the security industry

03. The next stage will consist of active spam phishing and malware feed access purchase including successfully

geolocated placement within specific regions of choice of interest inducing but not limited to Algeria, Argentina,

Bahrain, Bolivia, Brazil, Burkina Faso, Chile, China, Colombia, Cyprus, Ecuador, Guatemala, Jordan, Democratic

People's Republic of Korea, Liberia, Macao, Maldives, Moldova, Republic of Nauru, Niger, Pakistan, Poland, Romania,

Sierra Leone, Sudan, Arab Republic Syrian, Togo, Uganda, Vanuatu, Yemen.

- Associated deliverables will include access to the world's largest portfolio of threat intelligence data set including

access to real-time data successfully empowering the operator with the necessary data to perform an operator

activity.

214

04. The next stage will include the active acquisition of service-based type of localization and acquisition solutions

leading to a successful set of data to be processed and collected by the sensor.

- Associated deliverables will include access to proprietary technology successfully empowering the operator

with the necessary data to perform the operator activity including real-time monitoring of the world's largest

and most comprehensive sensor network based type of cybercrime and cyber-jihad sensor based type of plat-

form.

05. The next phase will include the active data acquisition from the Intelligence Community's leading intelligence

gathering platform in the form of active data placement including the establishment of an active threat intelligence-

gathering portal based type of platform.

- Associated deliverable will include the world's largest data set of cybercrime and cyber jihad activity sensor type

of platform eventually leading the Obmonix platform to reach a commercialization stage further enhancing the

Intelligence Community's and the security industry's mission.

Detailed Project Cost Proposal Information

The initial stage of the project will consist of selective and timely purchase of all the necessary appliances in-

cluding the timely localization and successful acquisition of fake Web sites honeypot solutions including the active

acquisition of network assets for the purpose of successfully honeypot solution placement.

- **FortiMail**

Key points:

- The appliance is capable of processing millions of emails on a daily basis
- The appliance is capable of maintaining a list of thousands of fake emails allowing additional attribution poten-

tially expanding the capabilities of the appliance to include additional custom made spam origin sources.

- The appliance is capable of delivering actionable intelligence on millions of spam origin sources, for Iran, Pak-

istan, Saudi Arabia, Iraq and Syria, on a daily basis

- The appliance is capable of delivering detailed information, leading, to the production of actionable intelligence,

for Iran, Pakistan, Saudi Arabia, Iraq and Syria, on a daily basis.

215

The FortiMail appliance would ensure the active acquisition of spam for the purpose of establishing the foundations

for a successful research and monitoring type of research and analysis type of system allowing the systematic

real-time and automated acquisition of malicious software phishing and social engineering.

- **Blue Coat Malware Analysis**

Key points:

- The appliance is capable of processing thousands of malware samples, on a daily basis
- The appliance is capable of maintaining detailed information processed and delivered in an automated fashion

for malicious sources originating in Iran, Pakistan, Saudi Arabia, Iraq and Syria

- The appliance is capable of interacting with Web links found in malicious spam emails for the purpose of es-

tablishing the foundations, for successful monitoring of malicious software phishing and social engineering

originating for Iran, Pakistan, Saudi Arabia, Iraq, and Syria including the automated processing and interaction

with mobile malware

- The appliance is capable of maintaining detailed information leading to the production of quality real-time, actionable intelligence type of reports for malicious software phishing and social engineering data type of origin

sources for Iran, Pakistan, Saudi Arabia, Iraq and Syria

The Blue Coat Malware Analysis would ensure the automated and real-time acquisition of malicious software

phishing and social engineering type of research and analysis type of research for the purpose of ensuring the active

and real-time acquisition of malicious software phishing and social engineering research type of activity originating

in these sources.

- **Vormetric encryption appliance**

216

Key points:

- The encryption appliance would ensure the real-time data storage of the research and analysis type of research

and analysis type of data to ensure the availability confidentiality and integrity of the data for the purpose of

producing actionable real-time intelligence based type of research and analysis reports type of research and

analysis data.

- The encryption appliance would ensure the active real-time storage of the actionable and real-time delivered

type of research and analysis type of data allowing the efficient and systematic and automated research and

analysis type of research report data to be processed and analyzed.

The encryption appliance would ensure that the platform operator is properly empowered with the necessary data

techniques and technologies to properly act upon analyze and respond to cybercrime and cyber jihad events globally.

- **Barracuda Web Application appliance**

Key points:

- The Web application appliance would allow the automated secure use of the robot system allowing the system-

atic real-time data acquisition on various jihadist sources

- The Web application appliance would ensure the automated and efficient use of the robot in a secure fashion

allowing the production of real-time actionable intelligence allowing the production of research and analysis

based type of research and analysis type of, data.

The Web application appliance would ensure that the operator is properly empowered with the necessary data

techniques and technologies to properly act upon analyze and respond to cybercrime and cyber jihad events globally.

- **Checkpoint DDoS Protector**

217

Key points:

- The appliance is capable of preventing exposure of the network assets utilized by the network resulting poten-

tially resulting in the exposure of the availability confidentiality and integrity of the information

- The appliance is capable of ensuring the real-time automated and persistent availability and integrity and confidentiality of the information

The Checkpoint DDoS Protector would ensure the constant availability of the network infrastructure utilized in this

project potentially preventing compromise of the network assets resulting in improved productivity and realization

of various project objectives.

- **Encryption appliance**

Key points:

- The encryption appliance is capable of ensuring the confidentiality integrity and availability of the information
- The encryption appliance is capable of distinguishing between multiple networks further ensuring a closed

network type of network access

The encryption appliance would ensure that the maximum possible secure measures are currently in place further

ensuring that access to the closed restricted network remains as private as possible ensuring the confidentiality

integrity and availability of the information to further ensure the active real-time intelligence based real-time type of

research and analysis type of research and analysis type of data.

- **Cisco Catalyst**

Key points:

- The appliance is capable of ensuring the real-time and automated use of the network equipment necessary to

maintain the active infrastructure to ensure that it's operating in an automated and efficient fashion

Cisco Catalyst is a network equipment allowing the efficient productivity type of interconnection between all the

platforms and network equipment used in this project.

- **Kapow appliance**

Key points:

- The appliance is capable of processing hundreds of thousands of Web sites on a daily basis ensuring the au-

tomated processing and analysis of jihadist communities allowing the automation of the monitoring process

to further enhance the produced actionable intelligence leading to a research and analysis produced type of

research and analysis type of data.

- The appliance is capable of monitoring and establishing the foundations for real-time monitoring and analysis

of jihadist communities for the purpose of producing actionable real-time intelligence research and analysis

type of research and analysis data.

219

- The appliance is capable of processing multiple jihadist forum communities for the purpose of establishing the foundations for successful real-time actionable intelligence producing research and analysis type of research and analysis data.

The analysis appliance would ensure timely and real-time access to current and historical intelligence data in regard to jihadist activities online, through the systematic automated and real-time data acquisition from a variety of public

and closed sources for the purpose of setting up the foundations for a successful data source leading to a successful

analysis and research type of analysis activities.

- **Appliance router**

Key points:

- The appliance router would ensure the constant and real-time availability of the network assets for the purpose of active and timely acquisition of actionable real-time research and analysis type of research and analysis report

type of research and analysis network assets availability.

The purpose of the appliance router would be to ensure real-time connectivity with a variety of platforms to ensure

that the operator is properly empowered with the necessary data techniques and technologies to properly act upon

analyze and respond to cybercrime and cyber jihad events globally.

- **Analytics appliance**

220

Key points:

- the analytics appliance would be capable of performing real-time assessment of cybercrime and cyber jihad

events globally and will ultimately empower the Obmonix platform operator with the necessary data informa-

tion and knowledge to act upon prevent and respond to cybercrime and cyber jihad events globally

The purpose of the appliance would be to empower the operator with the necessary data information and knowledge

to act upon react to and respond to various cybercrime and cyber jihad events globally.

- **Rosette appliance**

Key points:

- The localization appliance will ultimately empower the Obmonix platform operator with the necessary data

information and knowledge to act upon respond to and prevent widespread damage while analyzing cybercrime and cyber jihad events globally.

The purpose of the localization appliance would be to empower the Obmonix platform operator with the necessary data information and knowledge to act upon respond to and prevent widespread damage provoked by cybercrime and cyber jihad events globally.

- **Systran appliance**

221

Key points:

- The Systran appliance will ultimately empower the operator with the necessary data information and knowledge

to act upon respond to and prevent widespread damage while analyzing cybercrime and cyber jihad events globally.

The purpose of the Systran appliance would be to empower the Obmonix platform operator with the necessary data information and knowledge to act upon respond to and prevent widespread damage provoked by cybercrime and

cyber jihad events globally.

Funding Phase

The initial funding phrase will consist of active acquisition of assets for the purpose of obtaining access to

industry leading and proprietary selected providers of threat intelligence for the purpose of establishing the

foundations for an active sensors network type of cybercrime/cyber jihad monitor sensor network type of data. The

initial stage will consist of obtaining assets for the purpose of obtaining access to industry leading and proprietary

selected equipment for the purpose of setting the foundations for a successful sensor network based type of data.

The initial phase will consist of active purchase of the following equipment: FortiSandbox, Blue Coat Malware

Analysis, NAS Storage, Cisco Firewall, PfSense, Cisco Catalyst, Vormetric encryption appliance, including the following

subscription-based type of threat intelligence gathering data - Team Cumry, threat, data, feed, Kaspersky, threat,

data, feed, Abusix, threat, data, feed, MalwarePatrol, threat, data, feed, Sophos, threat, data, feed, OPSWAT, Abusix,

Threat, Feed, Threat, Feed, ProjectHoneypot, threat, data, feed.

- Kaspersky Data Feed

- Sophos Data Feed
- Team Cumry Data Feed
- MalwarePatrol Data Feed
- Abusix Data Feed
- LookingGlass Data Feed
- Cyren Data Feed
- Symantec Data Feed
- VirusTotal Data Feed

222

- ProjectHoneypot Data Feed

The second funding phase will consist of active acquisition of honeypot appliance including active netblock

purchase within a dedicated set of countries for the purpose of establishing the foundations of an active sensor

network type of data-acquisition activities. The second funding phase will consist of active acquisition of the following

proprietary appliances: Honeybox Enterprise, honeybox SCADA, including netblocks within the following countries,

The third funding phase will consist of active purchase of service and solution-based appliance, including data-

processing appliance, including localization appliance, for the purpose of setting up the foundations for the Obmonix

platform successfully empowering its operator with the necessary data and expertise for the purpose of actively responding to global cybercrime and jihad events.

The third funding phase will consist of active purchase of the following appliances: Kapow Software, Rosette

appliance, Systran appliance, Sentinel appliance, Palantir appliance.

The fourth funding phase will consist of active purchase of the World's most popular solution-oriented portal

for Information Security - **Expedited Entry Into the Cyber Warfare Realm - a Pro-U.S Based Offensive and Asymmet-**

ric Cyber Warfare Practical Trends Application Big Data and Research-Centered R &D Platform - further ensuring

successfully and ongoing commercialization including the active acquisition of client-base, including the establishing

of the World's largest endpoint based sensor network for tracking and responding to cybercrime and jihad events

globally.

Dancho Danchev will build a pro-U.S offensive and asymmetric cyber warfare program that will inevitably dive

deep into the Cyber Warfare realm and will produce what can be best described as the U.S primary source for

offensive and asymmetric cyber warfare information repository and data-information on current and future trends

and provide the foundations for a successful R &D cyber warfare partnership with millions of loyal Pro-Western

cyber warriors and researchers globally positioning the platform as the leading think-tank for practical and relevant

cyber warfare power including the World's leading Pro-Western Cyber Warfare Research and Development research program center.

With the U.S attempting to tackle the country's perceived and outdated Mis-understanding of Cyber Warfare

in Today's Modern Russia China and Iran dominated Cyber Warfare Realm including the ongoing shortage of

recruitment and relatively outdated and not necessary dynamic HR-management pool of hundreds of thousands of

Pro-U.S Cyber Warriors the platform ultimately empower the re-position the U.S as the dominant Cyber Warfare

power by providing actionable think-tank type of proactive and actionable Cyber Warfare insight including the active

and permanent recruitment of millions of Pro-U.S Cyber Warriors further supporting the U.S's mission on its way to

dominate and launch offensive and defensive cyber missions and related research attacks.

The project will conduct what can be best described as the most comprehensive study and analysis to the

United States out-dated understanding of the Cyber Warfare realm and provide actionable and practical insight including a production-ready HR-management and Big Data driven Cyber Warfare platform successfully disrupting

international cybercrime networks conducting economic terrorism infiltrating the vibrant cyber-crime and cyber jihad

international community and successfully recruiting millions of Pro-U.S Cyber Warriors. The First Stage of the project

would ensure that the foundations for a successful invite-only Pro-U.S Cyber Warfare community have already been

established through the direct launching and operation of the World's Largest and Proprietary Invite-Only Pro-U.S

Cyber Warfare Forum Community.

Associated deliverables will include: the World's largest search engine for security information, the World's

most vibrant community for security job search, the World's most vibrant proprietary community for sharing dissem-

inating communicating and enriching security data, the World's most comprehensive sensor network for observing

disseminating and responding to global cybercrime-events, the release of community-enriched security router, the

successful release of community-enriched privacy router, the development and release of community-enriched

public threat feed, the release of community-enriched private threat feed, including, proprietary threat feed, targeted

threat intelligence on demand type of research and analysis producing solution, proprietary bug bounty solution,

hacking and security-oriented online radio, hacking and security-oriented E-zine, hacking and security-oriented

videocast, on-demand penetration testing and offensive team consulting, on-demand Web site monitoring for

security events, OEM partnership capabilities, custom-build anti-virus scanner capabilities.

Community Industry Reference

The contractor Dancho Danchev is an internationally recognized cybercrime researcher security blogger and threat

intelligence analyst in the field of cybercrime research having successfully contributed to the overall demise of

cybercrime internationally throughout the past decade having successfully pioneered a variety of threat intelligence

gathering methodologies leading him to a successful, pursued of high profile nation-state actors and malicious actors

across the globe leading him to a successful pursued of high-profile nation-state actors and malicious adversaries

across the globe the researcher successfully launched a newly launched startup named Disruptive Individuals aiming

to disrupt the undermine the international cybercrime and cyber-jihad ecosystem globally.

Statement of Work (SOW)

01. Vendor contact - the initial stage of the project will consist of direct contact between industry leading commercial

security appliance providers further requesting pricing and shipping details including a “point-of-contact”.

- Possible deliverables consisting of the initial stage include industry-leading security appliance - FortiMail, Blue

Coat Malware Analysis. FortiSandbox, Vormetric encryption appliance, Barracuda Web Application appliance,

Checkpoint DDoS Protector, Ethernet encryptor, Cisco Catalyst, Kapow appliance, Palantir appliance, Cisco fire-

wall appliance, Rosette appliance, Systran appliance, NAS appliance, pfSense appliance, Honeybox appliance,

Honeybox SCADA appliance.

02. Vendor netblock contact - The initial stage of the project will consist of direct contact between industry leading

224

providers of netblock requesting pricing information for specific pre-defined geolocated regions of interest.

- Possible deliverables including netblock in Algeria, Argentina, Bahrain, Bolivia, Brazil, Burkina faso, Chile, China,

Colombia, Cyprus, Ecuador, Guatemala, Jordan, Democratic People's Republic of Korea, Liberia, Macao, Mal-

dives, Moldova, Republic of Nauru, Niger, Pakistan, Poland, Romania, Sierra Leone, Sudan, Arab Republic Syrian,

Togo, Uganda, Vanuatu, Yemen.

03. Vendor threat data contact - the initial stage of the project will consist of direct contact between industry-leading

including a selected set of threat data providers requesting pricing information including possible partnership

opportunity.

- Possible deliverables including Team Cumry threat data feed Kaspersky threat data feed, Abusix threat data

feed, MalwarePatrol threat data feed, Sophos threat data feed, OPSWAT, Abusix Threat Feed, ProjectHoneypot

threat data feed.

04. Secure location foundation - the initial stage of the project will consist of direct evaluation of the infrastructure

required for the secure location including direct contact between security vendors to ensure a secure location.

- Possible, deliverables, include, military-grade, fence, surveillance, security, guard.

05. Vendor connection contact - the initial stage of the project will consist of direct contact between vendor to

ensure that the infrastructure is properly secured ensuring a timely and secure infrastructure.

- Possible deliverables include direct connection.

06. Secure work environment - the initial stage of the project will consist of direct evaluation including a direct

purchase of a work terminal to ensure a smooth and secure work environment

- Possible deliverables including RF shielding, SEL SP-157, FSPK-10, SEL SP-113 "Blockade".

07. Secure work environment - the initial stage of the project will consist of direct evaluation including a direct

purchase of equipment related to secure work environment to ensure a smooth and secure work environment.

- Possible deliverables including Cisco Firepower ASA, CheckPoint Threat appliance, Nova network appliance,

Fortinet security appliance, Dell Soho network, security appliance.

The contractor Dancho, Danchev is one of the world's leading experts in the field of cybercrime research and threat

intelligence gathering having successfully tracked monitored and profiled high-profile nation-state and malicious

actors type of fraudulent activity over the past decade having successfully pioneered and established a direct

connection with some of the world's leading providers of threat intelligence gathering.

The contractor's initial goal for the purpose of the Obmonix platform would be to achieve the world's largest

225

and most comprehensive sensor type of network for monitoring profiling and keeping track of nation-state malicious-actors type of fraudulent and malicious activity.

The project main base would be located in a discreet location in Sofia Bulgaria. The contractor would eventu-

ally ensure that active RF shielding including basic physical security measures are taken in place including active

surveillance military-grade fence and an associated security guard are in place for the purpose of establishing the

foundation of a secure work environment.

The Obmonix platform aims to build the World's most versatile and comprehensive sensor network for inter-

cepting monitoring and responding to cybercrime and cyber jihad events successfully deploying a variety of

proprietary sensor network based of honeypot appliances industry-wide partnership including the utilization of

proprietary cybercrime and cyber jihad forum and community monitoring and infiltration campaigns successfully

positioning the platform as the leading indicator for cybercrime and cyber jihad activity globally.

Cost Proposal - Detailed Project Information

01. Equipment cost - The Obmonix platform will ultimately rely on the following equipment cost for the purpose of establishing the foundations for the Obmonix platform.

- FortiMail
- FortiSandbox
- Blue Coat Malware Analysis
- Vormetric encryption appliance
- Checkpoint DDoS Protector
- Encryption appliance
- Cisco Catalyst
- Kapow appliance
- Appliance router
- Analytics appliance
- Infoblox Trinzic 1420
- Nova network security
- Cisco firewall appliance
- IllusionBlack Framework
- Rosette appliance
- Systran appliance

- NAS appliance
- pfSense
- Honeybox appliance
- Honeybox SCADA appliance
- Network equipment

Detailed Project Funding Phase Information

01. The initial funding phrase will consist of active acquisition of assets for the purpose of obtaining access to industry

leading and proprietary selected providers of threat intelligence for the purpose of establishing the foundations for

an active sensors network type of cybercrime/cyber jihad monitor sensor network type of data. The initial stage

will consist of obtaining assets for the purpose of obtaining access to industry leading and proprietary selected

equipment for the purpose of setting the foundations for a successful sensor network based type of data.

- The initial phase will consist of active purchase of the following equipment: FortiSandbox, Blue Coat Malware

Analysis, NAS Storage, Cisco Firewall, PfSense, Cisco Catalyst, Vormetric encryption appliance, including the

following subscription-based type of threat intelligence gathering data - Team Cumry threat data feed, Kaspersky

threat data feed, Abusix,threat data feed, MalwarePatrol threat data feed, Sophos threat data feed, OPSWAT,

Abusix Threat Feed, ProjectHoneypot threat data feed.

Including the following Threats Feeds:

- Kaspersky Data Feed
- Sophos Data Feed
- Jigsaw Threat Data Feed
- IBM X-Force Exchange
- Team Cumry Data Feed
- Proofpoint Threat Feed
- NetSTAR Data Feed
- RiskIQ Data Feed
- ESET Data Feed
- Pixalate Data Feed
- MalwarePatrol Data Feed
- Abusix Data Feed
- Massive Data Feed
- PhishLabs Data Feed
- LookingGlass Data Feed

- Blueliv Data Feed
- Mnemonic Data Feed
- Cyren Data Feed
- ADMINUSLabs Data Feed
- NSFOCUS Data Feed
- Webroot Data Feed
- Symantec Data Feed
- VirusTotal Data Feed
- ProjectHoneypot Data Feed

02. The second funding phase will consist of active acquisition of honeypot appliance including active netblock purchase within a dedicated set of countries for the purpose of establishing the foundations of an active sensor network type of data-acquisition activities.

- The second funding phase will consist of active acquisition of the following proprietary appliances: Honeybox

Enterprise, Infoblox Trinzi 1420, honeybox SCADA, including netblocks within a dedicated set of countries -

Algeria, Argentina, Bahrain, Bolivia, Brazil, Burkina faso, Chile, China, Colombia, Cyprus, Ecuador, Guatemala,

Jordan, Democratic People's Republic of Korea, Liberia, Macao, Maldives, Moldova, Republic of Nauru, Niger,

Pakistan, Poland, Romania, Sierra Leone, Sudan, Arab Republic Syrian, Togo, Uganda, Vanuatu, Yemen.

03. The third funding phase will consist of active purchase of service and solution-based appliance, including

data-processing appliance, including localization appliance, for the purpose of setting up the foundations for the

Obmonix platform successfully empowering its operator with the necessary data and expertise for the purpose of

actively responding to global cybercrime and jihad events.

- The third funding phase will consist of active purchase of the following appliances: Kapow Software, Rosette

appliance, Systran appliance, Sentinel appliance, Palantir appliance.

In case you're interested in working with me for the purpose of implementing this project including possible investor

Who's Behind BakaSoftware? - OSINT Analysis (2019-01-15 18:32)

Remember [1]**BakaSoftware**? The ubiquitous scareware-serving and distributing money laundering scareware

affiliate-based network circa 2008? It appears that the time has come to expose the actual individuals behind the

campaign and the actual network.

In this analysis I'll discuss in depth the BakaSoftware franchise circa 2008 including in-depth and personally

identifiable information on the cybercriminals behind it with the idea to empower law enforcement and the security

industry with the necessary data and information that would eventually lead to the prosecution and tracking down

of the cybercriminals behind BakaSoftware.

I can be reached at dancho.danchev@hush.com

Exposing Iran's Most Wanted Cybercriminals - FBI Most Wanted Checklist - OSINT Analysis (2019-01-16 11:09) Remember my most recently published "**[1]Assessing The Computer Network Operation (CNO) Capabilities of**

the Islamic Republic of Iran - Report"? The report details and discusses in-depth the most prolific Iran-based

government-sponsored and tolerated hacking groups including the following groups:

- Ashiyane Digital Security Team
- Iranhack Security Team
- Iranian Datacoders Security Team

- Iran Security Team a.k.a SEPANTA Team/Iran Cyber Army
2012/2013

- IDH Security Team
- Bastan Security Team
- NOPO Digital Security Team
- Shekaf Security Team
- Mafia Hacking Team
- Iran Black Hats Team
- Delta Hacking Security Team
- Digital Boys Underground Team
- Irlst Security Team

I recently came across to **[2]FBI's Most Wanted Cybercriminals** List and decided to elaborate more by provide-

ing actionable Threat Intelligence on some of the most Wanted Iranian cybercriminals with the idea to help law enforcement and to inform the security industry and to ensure that the cybercriminals behind these campaigns can be properly tracked down and prosecuted.

I can be reached at dancho.danchev@hush.com

In this OSINT analysis I'll provide actionable intelligence including personally identifiable information some of

FBI's Most Wanted Iranian cybercriminals including
[3]Ahmad Fathi, [4]Hamid Firoozi, [5]Amin Shokohi,
[6]Mohammad Sadegh Ahmadzadegan, [7]Omid
Ghaffarinia, [8]Sina Keissar, [9]Nader Saedi including
the infamous ITSec Team and the Mersad Co. company.

Mohammad's life has strongly tied with programming. After graduation of Computer Engineering, he studied IT

(E-Commerce) for his Master to know more about the relation of business and technology. You can find some large

scale software projects managed by him like Iran's SOC, SDIDS, Jolfa Vulnerability DB and etc. Now he is a university

lecturer and also CEO of Mersad Co. and one of TKJ Co. consultants. Mohammad is here to help you how to manage

a good develop team and guide you to have better usage of technology to achieve your business goals.

YAHOO PHONE NUMBER SUPPORT : RESOLVE YAHOO MAIL TECHNICAL ERRORS WITH THE HELP OF EXPERTS

Yahoo is a renowned name all across the globe and has got one of the biggest customer bases in the world. There are millions of people enjoying the service of yahoo and using their email service to get along with their day to day jobs. Yahoo's email service is undoubtedly one of the most favorite email service among users because of the different add on features that accompanies the email service which is not available anywhere else. Yahoo vows to present their customers with the best of services possible and always strive to bring out the best among the employees. But unfortunately there are times when the customers face issues with the email service and are faced with different technical glitches ranging from simple to complex ones that are not possible for the customers to solve on their own. That is when they seek for a technical guidance and yahoo customer support comes into the picture. Yahoo customer service has been working for years 24*7 every day of the year so that the customers enjoy an uninterrupted and smooth service from yahoo. The professionals working in Yahoo customer service are energetic people very passionate about their job. They are keen on helping people. Being certified professionals they have the required knowledge to handle problems and come up with optimized and innovative solutions.

A promotional banner for Gmail's email support services. The banner has a dark background with a blurred image of a man with glasses on the right side. On the left, there's a grid of four teal-colored buttons with white icons: an envelope for 'Gmail Help', a clock for '24*7 Support', gears for 'Gmail Support', and a telephone for 'Toll Free Service'. Above the grid, the text 'Email Support' is written in white, and 'Services Policy Blog' are in smaller white text. To the right of the grid, the text 'Contact Us' is in white, followed by 'Instant Solution, Safe & Secure' and 'Gmail Customer Service Number +1-800-674-2913' in teal. Below this, it says 'We help you to solve Gmail account errors in a successful way.' and 'Similar services are available on Google help.' in yellow. In the top right corner, 'Toll Free +1-(800)-674-2913' is written in white.

Stay tuned for the updated portfolio of Fake Tech Support Scams to be published anytime soon!

The Threat Intelligence Market Segment - A Complete Mockery and IP Theft Compromise - An Open Letter

to the U.S Intelligence Community (2019-01-24 19:25)

I recently came across to the most recently published **[1]DoD Cyberspace Strategy 2018** which greatly reminded me

of a variety of resources that I recently took a look at in terms of catching up with some of the latest cyber warfare

trends and scenarios. Do you want to be a cyber warrior? Do you want to "hunt down the bad guys"? Watch out -

Uncle Sam is there to spank the very bottom of your digital irrelevance. How come?

It appears that the U.S is re-claiming back the dominance over the "communication channel" using a variety

of real-life oriented cyber threats including referencing and citing security researchers and NGOs (Non-Profit

Organization) as potential threats. Takes you back - doesn't it? If it's going to be massive it better be good.

It's been several years since I last posted a quality update following my **[2]disappearance and possible kidnapping**

attempt circa 2010. What really took place during that period of time? The rise of ransomware? The rise of Tech

Support Scams? Yet another botnet currently spreading In The Wild? A market-driven buzz-word generation?

Take that - ransomware is there to take care, hundreds of thousands of supposedly relevant IOCs (Indicators of

Compromise) TTPs (tactics techniques and procedures) discussed to the bottom of your PR-relevant online presence.

The Rise of the Threat Hunter job career opportunity basically empowering with you with the almighty skills to "track

down" and "shut down" the bad guys? You wish - Uncle Sam is always there to take care.

Let's discuss the Threat Intelligence market segment and offer an in-depth discussion on its inner working in-

cluding a possible discussion on the Threat Intelligence market segment in today's modern Intelligence Community

successfully realizing the consequences of what was once a proprietary network known as the Internet - today's

412

modern cyber warfare operational battlefield.

Many of my blog readers are familiar with my work throughout the years however what you might not be aware of

is the fact that throughout the 90's I used to pioneer the position of Technical Collector in the context of processing

hundreds of malicious and user-friendly Trojan Horses also known as Remote Backdoors what would be later on

described as Remote Access Tools through my hacker enthusiast years as an independent contractor and novice

hacker working with the market-leading LockDownCorp anti-trojan horse software including leading to what would

be later on better described as the foundations of the Threat Intelligence market qualitative Technical Collection

including the very basics of the foundations of CYBERINT.

Let's discuss in-depth the current state of the Threat Intelligence market segment including an in-depth discus-

sion on the Threat Intelligence market segment in the context of today's modern U.S Intelligence Community.

- **Indicators of Compromise** - the vary basics of formulating a new buzz-word for what was once a proprietary-

term coined by the Intelligence Community to populate and disseminate actionable nation-state Cyberspace

data to a variety of defensive and offensive Cyber Warfare Units can be best described as a New Age in the

area of responsive and proactive OSINT type of acquisition methodologies that can be best described as a new

way to acquire leaked and potentially data-and-resource exposure in a variety of automated ways. Generalizing

413

the very basics of the Threat Intelligence market segment in the context of potential Indicators of Compromise leaks can

be best tackled in a way of offering central repositories including "government-free" access including

a nation-state Early Warning System for potential Cyberspace threat data including a variety of Indicators of

Compromise to prevent wide-spread data and information leaks further protecting the U.S Government from

current and emerging threats.

- **Corporate Sector Data Mining Should Considered** - what was once best known as "conducting cyber espionage

through botnets" including the conducting of "cyber espionage through data mining of malware-infected corpo-

rate networks" can be best described as today's proposed central Incident Response based central-repository

empowering the U.S Intelligence Community with the necessary data and expertise to stay ahead and act upon

current and emerging cyber threats.

- **Private Sector Cooperation and the "You Wish" mentality** - the general assumption that the private sector will continue to cooperate and empower the U.S Intelligence Community with the necessary data information and

knowledge should be considered a wrong approach on the U.S Intelligence Community's way to further protect

the U.S national infrastructure including the proactive response to current and emerging cyber threats. What

can be best done to further protect the U.S Government from current and emerging threats can be best de-

scribed as a modern central-repository of "government-free" access based Cyber Threat Data type of platform.

- **Slicing the Threat on Pieces Should be Ignored -**

What can be best described as the process of slicing the threat

"on pieces" is today's modern World of PR agencies and Threat Intelligence market segment intermediaries

including the active labeling of a particular group of interest or an individual as a separate entry leading to an

overall mis-confusion in the context of actually providing actionable Threat Intelligence to the U.S Intelligence

Community that could ultimately better protect the U.S National Infrastructure. With the mainstream media

continuing to raise the buzz around popular terms and newly coined cyber threat actor groups in the face of the

rise of the advanced persistent threat media-buzz generating initiative it should be clearly noted that the overall

irrelevance of labeling a specific cyber threat actor in the public domain should be considered as an irrelevant

exercise in the broad context of providing the U.S Intelligence Community with the necessary data information

and knowledge to stay ahead of current and emerging cyber threats.

- **Tactics Techniques and Procedures Should Be Buzz-Word Ignored -** The very basics of coining a term term

for the purpose of describing what can be best described as a general cyber threat methodology known as

qualitative assessment should be considered as a possible flag raising operation that should be considered as

a possible source for mis-confusion in terms of the broader context of discussing and reacting to current and

emerging cyber threats.

• **The Rise of the "Threat Hunter" Cyber Security Career Position Is Already Causing Headaches** - The rise of

the "Threat Hunter" career position can be best described as a complete failure to understand the basics that

drive today's modern Cyber Warfare Team including possible defensive and offensive Cyber Warfare Units and

Cyber Operations Groups. With everyone "interested" in becoming a Cyber Warrior including a possible "Threat

Hunter" it should be noted that the over-supply of private-sector companies stealing revenue from Uncle Sam

for the purpose of enriching and disseminating actionable Threat Intelligence is overly increasing resulting in

the overall demise of what was once a proprietary technology and know-how in the hands of a few that truly

grasped the market and its potential successfully serving the needs of the U.S government for years to come.

• **The Rise of Secondary Markets for IOCs Should Provide "Government-free" Access** - The general over-

supply

of market-segment driven repositories of actionable Threat Intelligence data should be greatly attributed to a

variety of factors including the rise of the Threat Intelligence market segment and should be considered as a

way for the U.S Intelligence Community to clearly seek a technical and potentially market-segment relevant way

to populate a potential Cyber Threats data-base using public and proprietary sources with a clear "government-

free" access in mind.

414

Current Proposals to U.S Intelligence Community in Terms of Threat Intelligence and Nation-State Actors:

- **Clusted Activity** - Taking into consideration the fact that on the majority of occasions the majority of quality

Threat Intelligence type of data is publicly obtainable using a variety of public and potentially proprietary sources

is should be considered feasibly possible for the U.S Intelligence community to build manage and operate a

proactive-based Cyber Threats anticipating platform including a possible Early Warning Based type of OSINT-

capable system able to anticipate and act upon current and emerging threats with a possible cluster-based

type of data mining and information processing capabilities potentially serving the needs of the U.S Intelligence

Community.

- **Government-free Access** - The very notion that an Indian-based company will successfully manage launch and

operate a Threat Intelligence business should be largely ignored for the very sake of figuring out a way to ob-

tain access to a particular company's Threat Intelligence data information and knowledge citing potential Nation

Security issues. What should be considered in terms of obtaining access to a company's data-base citing poten-

tial National Security issues is the so called notion of "government-free" access based type of private sector

partnership.

- **Talent Acquisition Roles** - In today's modern Talent Acquisition Wars it should be clearly noted that a select set

of key individuals can greatly contribute to the overall demise of cybercrime internationally taking into consid-

eration the overall demise of the "Wisdom of the Crowds" market-segment driven-concept. What should be

considered when hiring a potential top-notch Cyber Warfare and Information Warfare-based type of personnel

shouldn't be necessary years and decades worth of experience but the overall disruptive degree of the individ-

ual in terms of "making a change" and "making an impact" compared to a certification-based-driven crowd of individuals.

415

- **Central Repository** - What the modern U.S Intelligence Community can better do to better protect the nation's Infrastructure should be considered in something in the lines of a central-private-sector driven repository of

Threat Intelligence type of data including the notion of a "government-free" access in terms of obtaining access

to a public or a proprietary company information and data assets.

Historical OSINT - Re-Shipping Money Mule Recruitment "Your Shipping Panel LLC" Scam Domain Portfo-

lio Spotted in the Wild (2019-02-07 10:14)

The time has come to profile a recently intercepted and currently active malicious and fraudulent re-shipping money mule recruitment fraudulent campaign successfully enticing users into interacting with the rogue and bogus content potentially risk-forwarding the risk of the fraudulent transaction to the unsuspecting user.

Sample malicious URL:

hxxp://yourshippingpanel.com

Sample Mailing Address:

One World Trade Center, New York, NY, 10007, USA

+1 (606) 879-0046

Sample Company Description:

" Your Shipping Panel LLC" is successfully positioning the company "Founded in 1995, is a package delivery company with services to Eastern Europe as well as to all the countries of the former Soviet Union. Over the years, Your

Shipping Panel LLC has grown into an industry leader by focusing on the goal of connecting customers in the United

States with their families, friends and businesses in Eastern Europe. This also includes e-commerce between those

countries. Today, Your Shipping Panel LLC has become a dominant force in package delivery with services to Ukraine,

Russia, Belarus, Moldova, Uzbekistan, Kazakhstan, Kyrgyzstan, Georgia, Azerbaijan and Armenia. Our specialized

transportation and logistics services to those countries lead the way as the most recognized brand in North America. "

Historical OSINT - Profiling a Typosquatted Facebook and Twitter Impersonating Fraudulent and Malicious

Domains Portfolio (2019-02-07 15:47)

With cybercriminals continuing to populate the cybercrime ecosystem with hundreds of malicious released including

a variety of typosquatted domains it shouldn't be surprising that hundreds of thousands of users continue falling

victim to fraudulent and malicious malware and exploits serving schemes.

In this post I'll profile a currently active fraudulent and malicious typosquatted domain portfolio successfully

impersonating Facebook and Twitter for the purpose of enticing users into interacting with the rogue and malicious

domains.

Historical OSINT - Profiling a Rogue and Malicious Domain Portfolio of OEM-Pirated Software

(2019-02-07 17:27)

In a cybercrime-ecosystem dominated by fraudulent and malicious releases cybercriminals continue relying on

fraudulent and potentially-malicious affiliate-based type of revenue-sharing schemes for the purpose of serving

fraudulent and malicious software to thousands of unsuspecting users including OEM-powered pirated software to

millions of users globally.

In this post I'll profile a currently active fraudulent and malicious domain portfolio of OEM-powered pirated-software serving fraudulent and malicious domains.

Related domains known to have participated in the campaign:

With software piracy continuing to increase and proliferate it shouldn't be surprising that rogue and fraudu-

lent affiliate-based type of networks will continue to make impact globally potentially exposing millions of user to a variety of risks including malicious software.

Stay tuned for an updated set of fraudulent and malicious piracy-themed portfolio of domains to be published anytime soon.

439

Historical OSINT - A Peek Inside The Georgia Government's Web Site Compromise Malware Serving Cam-

paign - 2010 (2019-02-07 17:30)

Remember the massive **[1]Russia vs Georgia cyber attack circa 2009**? It seems that the time has come for me

to

dig a little bit deeper and provide **[2]actionable intelligence** on one of the actors that seem to have participated in

the campaign including a sample Pro-Georgian type of Cyber Militia that apparently attempted to "risk-forward" the

responsibility for waging Cyberwar to third-parties including Russian and Anti-Georgia supporters.

How come? In this post I'll provide actionable intelligence on what appears to be a currently active Brazilian

supporter of the Cyber Attacks that took place circa 2009 with the idea to discuss in-depth the tools and motivation

for launching the campaign of the cybercriminals behind it.

Sample malicious URL known to have participated in the campaign:

hxxp://geocities.ws/thezart/

440

It's 2010 and I'm coming across to a malicious and fraudulent file repository that can be best described as a

key actor that managed to participate perhaps even orchestrate the Russia vs Georgia cyber attacks circa 2009. Who

is this individual? How did he manage to contribute to the Russian vs Georgia cyber attacks? Did he rely on active

outsourcing or was he hired to perform the orchestrated DDoS for hire attacks that took place back then? Keep reading.

It appears that a Brazilian user known as The Zart managed to participated in the Russia vs Georgia cyber at-

tacks circa 2009 relying on a variety of tools and techniques known as:

- DNS Amplification Attacks
- Web Site Defacement Tools
- Targeted Spreading of Vulnerable Legitimate Web Sites
- Automated Web-Site Exploitation - Long Tail of The Malicious Web

which basically resulted in a self-mobilized militia that actually participated and launched the Russia vs Georgia cyber attacks circa 2009.

Historical OSINT - Profiling a Portfolio of Fake Visa Application Scam Domains (2019-02-07 17:56)

It's been a while since I last posted a quality update profiling a versatile currently circulating malicious and fraudulent

spam campaign profiling and highlighting the fraudulent and malicious activities of the cybercriminals behind the

campaign.

In this post I'll profile a currently circulating Fake Visa Application fraudulent campaign enticing users into sub-

mitting their personal details for the purpose of obtaining a fake and rogue visa.

Related emails known to have participated in the campaign:

Historical OSINT - Sub7 Crew Releases New Version on 11th Anniversary of The RAT (2019-02-07 18:03)

It's 2010 and I've recently came across to the following announcement at Sub7's Main Forum - the most ubiquitous

trojan horse also known as Remote Access Tool circa the 90's on the upcoming release of a new version.

" People can buy unique FUD servers in the shop and custom clients can also be written to help you admin PC's

remotely with your own features. These are selling well so be sure to grab your own custom version while we are

offering them at this price. Please be advised there is currently a waiting list for this. "

Sample detection rate:

- **[1]borIndmm.dll** - Result: 0/42 (0 %)

- **[2]EditServer.exe** - Result: 10/42 (23.81 %)

- **[3]Server.exe** - Result: 18/41 (43.91 %)

- **[4]SubSeven.exe** - Result: 16/41 (39.03 %)

Should The Scene the way we know it re-appear the way we know it? It appears that every then and now a

new cybercrime-friendly tool is trying to materialize taking us back to what used to be The Scene circa the 90's.

Announcing Offensive Warfare 2.0 - Official Hacking and Security Community Launch (2019-03-22 15:14)

Dear blog readers, I wanted to let everyone know that I've recently launched a public **[1]hacking and cyber security**

community repository offering Security Directory Downloads Podcasts and Security Videos directory including a

countless number of hacking and security resources including a possible hacking and security discussion including

community-based services and products - to keep the spirit of the Scene and the Security Industry - the way we know it.

How to obtain access?

- consider approaching me at dancho.danchev@hush.com for the purpose of requesting an invite

How you can contribute?

- feel free to approach your colleagues and friends including social network in terms of spreading the word about the

portal and the community

- consider registering making an introduction and starting to contribute with content

- approach me directly at - dancho.danchev@hush.com with your questions and possible feature and content

suggestion

Looking forward to receiving your response including any additional questions or comments including sugges-

tions that you might have in terms of the project.

Stay tuned!

Dancho Danchev's 2010 Disappearance - An Elaboration - Part Two (2019-04-04 05:51)

[1]

UPDATE: I can be reached at dancho.danchev@hush.com or at +359 87 68 93 890 in case of an emergency.

UPDATE: It appears that recently a car belonging to local police department (**hxxp://troyan-police.com; police_troyan@abv.bg**) was stopped somewhere around my place with the lights turned on with the idea to provoke a possible local police visit.

UPDATE: It appears that my place was visited for a second time by local police officers (**hxxp://troyan-police.com; police_troyan@abv.bg**) with third-party doctors (**http://mbal-troyan.com; mbal_troyan@abv.bg**) for the purpose of apparently injecting me and a document for the injection was signed by someone that I know.

UPDATE: It appears that someone managed to twist my arm and therefore pressed a pressure on my eye without my knowledge with random people attempting to communicate with me behind a wall.

UPDATE: It appears that prior to my presentation at InfoSec 2012 someone managed to place a plaque on the wall in Earl's Court and therefore I experienced a pressure on my head while making a presentation.

UPDATE: It appears that prior to my presentation visit in Lyon in 2010 someone managed to wound my mouth with something that can be described as wall interference.

UPDATE: It appears that someone managed to open my eye and therefore I'm currently experiencing a pres-

sure behind a wall with random people attempting to communicate with me.

UPDATE: It appears that I'm currently persistently experiencing a pressure on my mouth including something in the lines of a toxic chemical on my nose.

UPDATE: It appears that someone managed to map my place including my head and body using rubber and is persistently trying to communicate with me.

UPDATE: In case you're interested in contacting me in terms of my law enforcement issues and potential

kidnapping and harassment attempts including possible interview requests - feel free to approach me at dan-

cho.danchev@hush.com as I'm currently busy looking for a full time cybercrime researcher security blogger and

threat intelligence analyst type of position.

I would be also definitely looking forward to sharing some of my sensitive projects including related work in

various other sensitive areas with the idea to end the ongoing IP (Intellectual Property) robbery courtesy of a variety

of industry-leading companies and individuals. **[2]Has the time come to work hard and set them straight?** It appears

so. Feel free to approach me at dancho.danchev@hush.com

451

452

You can use the following PGP key to approach me regarding possible **[3]career opportunities** regarding possible

453

involvement in related sensitive projects at dancho.danchev@hush.com or just to say hi request **[4]Threat Data**

access including a sample or a possible trial or make a comment regarding my current and **[5]historical OSINT**

research including possible references to my 2010 disappearance including various cybercrime underground chatter

referencing me and my research including disappearance and possible kidnapping including possible GCHQ Lovely

Horse references and related resources and comments.

Sample Information Security and Information Warfare cartoon circa 2008:

Second Sample Information Security and Information Warfare cartoon circa 2008:

UPDATE: It appears that someone managed to somehow place a basketball ball on my head chin and eye and

therefore I'm currently experiencing a pressure on my eye and my face with people attempting to communicate with me.

UPDATE: It appears that someone is attempting to communicate with me using pressure pressed on my stomach.

454

UPDATE: It appears that someone is pressing a doll on a wall and is attempting to communicate with me in-

cluding an increased pressure in my place.

UPDATE: It appears that different people are attempting to communicate with me behind a wall using a bas-

ketball ball interfering with the pressure in my place.

UPDATE: It appears that the robot has been persistently sprayed with homo-sexual spray including a possible

female spray leading to a persistent harassment and torture currently affecting my life-being work-relationships and

intellectual property.

UPDATE: It appears that someone managed to place a box on the top of the robot for a period of several

years successfully blinding me and restraining me from remote work activity.

In a related news story regarding my experience and expertise in the field it appears that the GCHQ has been actively

monitoring me on Twitter including active traffic monitoring in a 2012 Intelligence Community program labeled -

[6]Lovely Horse that's basically a Palantir implementation of **[7]OSINT practices** regarding a certain Twitter account.

The purpose? Active traffic and **[8]content monitoring** for the purpose of robbing me out of sensitive research and

related research data which leads me to believe that I've been successfully contributing to a massive treasure trove

IP (Intellectual Property) theft and robbery courtesy of the GCHQ and the NSA for a significant period of time.

455

- **[9]Western Spy Agencies Secretly Rely on Hackers for Intel and Expertise**

- **[10]LOVELY HORSE: GCHQ Program Monitored Hacker/InfoSec Community on Social Media**

- **[11]GCHQ's 'Lovely Horse' tool helped spooks monitor hackers online**

- [12]**GCHQ created 'Lovely Horse' to keep track of top hackers' and security specialists' blogs and tweets**
- [13]**Spy Agencies Rely on Hackers for Stolen Data and Monitoring Security Experts for Expertise**
- [14]**GCHQ Create Their Own Tweetdeck To Track People of Interest**
- [15]**GCHQ siphoned off info stolen by hackers for its own ends**
- [16]**Some hackers are unknowingly gathering intel for the NSA**

It's also becoming increasingly evident that I'm also a participant in several other Intelligence Community Pro-

grams that appear to have successfully attempted to rob and steal my "know-how" leading me to pursue a possible

closed-community data and research sharing or to request invite-only access to related research and data. Re-

member [17]**HBGary**? It appears that every then and now a security company tries to re-position the industry by

offering targeted and proprietary Threat Intelligence to a variety of sources successfully undermining a variety of

community-offered and presented actionable Threat Intelligence.

456

While it's an honor to receive a competing proposition it should be noted that the majority of my research is

public excluding several community-driven sensitive projects that I spend my time working on. It appears that the

time has come for me to take my research to a whole new level which led me to pursue my own career patch

within the Intelligence Community by successfully launching **[18]Disruptive Individuals** including the **[19]Obmonix -**

Cybercrime and Cyber Jihad Fighting Platform including the eventual launch of the invite-only **[20]Threat Data - The World's Most Comprehensive Threat Database** including a possible **[21]career opportunity** with the industry-leading Webroot including a short-term venture with **[22]GroupSense** including a possible **[23]SCMagazine 2011 nomination**

for my Twitter activity including the **[24]upcoming launch of Astalavista Security Group 2.0** - my primary working location throughout the 90's with a currently active crowdfunding campaign.

While I continue to be a firm believer that sharing and communicating actionable Threat Intelligence to a variety

of source is the appropriate way to proceed and process a variety of cybercrime-related campaigns and malicious

activity I believe that the time has come for me to take my research to a whole new level prompting me to seek a

new career opportunity as the **[25]World's leading cybercrime researcher security blogger and threat intelligence**

analyst.

457

The majority of sources referenced in the original research basically represent the majority of **[26]my RSS feeds**

circa 2006 and it's becoming increasingly interesting perhaps even funny to figure out that the majority of my

[27]OSINT techniques including active WHOIS monitoring and research are widely accepted and discussed within

the Intelligence Community.

458

What prompted the GCHQ to issue an active traffic and Twitter account monitoring campaign? Keep reading - back

in the day throughout the period of 2008-2013 I used to actively monitor and profile various high-profile nation-state

malicious and fraudulent campaigns including the

[28]infamous Koobface botnet - listed to the **[29]original**

MP3 interview - which I extensively **[30]profiled and managed to practically take down** including the **[31]active exposing** of its core **[32]botnet master** including the active exposure of client-side exploits being served through the

[33]Koobface botnet through what appears to be **[34]a partnership between the Koobface botnet master** and

a

well known cybercriminal - Exmanoize a well known author of a well known Web malware exploitation kit including

the receiving of malware-infected host embedded messages in response to my " **[35]10 things you didn't know**

about the Koobface gang" including **[36]what appears to be a [37]direct redirection of Facebook** to my personal blog including yet **[38]another message** left by the **[39]Koobface gang**, including a variety of **[40]typosquatted C &C**

server domains registered to my name **[41]including extensive [42]Russian Business Network** coverage at the time.

Sample Koobface Botnet Infographic courtesy of CyberCamp 2016:

459

It's also worth mentioning that at the time the **[43]U.S Treasury Department was also redirecting to my Blogger**

profile **[44]including the active HOST file modification** courtesy of a well known money-mule recruitment campaign.

Consider going through the following set of resources and news articles throughout 2008-2013 which can best

describe the Threat Intelligence Scene the way I know it and the way I'm positive it should be.

UPDATE: It appears that someone placed a remote robot at local police department capable of recording my life

including my life-being leading to a ruined career work relationships and intellectual property.

UPDATE: It appears that an unknown group of people is attempting to communicate with me using a transmitter on

my mouth using plastic paper in their mouth.

UPDATE: It appears that someone is permanently trying to hide my eyes using plastic paper apparently using

a transmitter that's been apparently placed on my mouth. It also appears that the person behind the transperant is

attempting to move closely thereby ruining my equipment and life-being.

UPDATE: It appears that the transperant is operated by someone relying on lenses including bottles to map and

touch-point related activities of an individual in place following persistent harassmt and life-being manipulation.

In a related news article - " **[134]ZDNet Security Blogger Goes Missing in Bulgaria**" covering my disappearance I came across to a juicy comment referencing the work of a well-known artist which leads me to research a little bit further

leading me to the following CD/Vinyl label - "Blue Sabbath Black Cheer / Griefer - We Hate You / Dancho Danchev

Suck My Dick" courtesy of the the following individual.

464

Take into consideration the following brief post regarding the associated individual:

" It's 2010 and I'm stumbling upon a defaced image of my head shot (circa 2006). I never actually bothered

about what others say, even when they insist that I'm maliciously enjoying the fact that I profile, expose, and disrupt

cybercrime campaigns when there's no time for enjoyment, as the stakes are too high.

*The defaced headshot is part of the released back in 2010 album "We Hate You/Dancho Danchev S*ck my*

*D*ck" by the Blue Sabbath Griefer group.*

465

So who's behind this "black PR" campaign? Who's the mysterious Photoshop-er? It's a [135]Canadian music artist

called [136]Ron Brogden, who spends his spare time coding for hire, when he's not photoshopping my headshots.

Hatred-friendly domain name reconnaissance:

deterrent.net - 95.142.172.70 - Email: slave@codegrunt.com

Domain owner: Ron Brogden, Secondary email: moron@industrial.org

Music Label Address: P.O. Box 8021; Victoria, BC, Canada; V8W 3R7

Home address: 647 Speed Avenue, Victoria, British Columbia, V8Z 1A5

Phone: +1.250-360-0372; +1.250-381-0088

Responding to the same IP are also the following domains operated by Ron:

codegrunt.com

deterrent.net

industrial.org

nuckflix.com"

466

In terms of my 2010 disappearance I also recently came across to the following **[137]screenshots** courtesy of the cybercrime-friendly forum Darkode courtesy of an individual known as Xylitol discussing my disappearance including a possible Hitman Request charging at \$10,000. Unfortunately, the screenshots were taken using the name of Nassef with whom Xylitol shared his accounting details with me including the taking of the screenshots.

467

468

469

470

471

472

UPDATE: It appears that my 2010's disappearance is slowly turning into a modest **[138]kidnapping attempt** on behalf of Bulgarian law enforcement in constitution with DANS (State Agency for National Security) who appear to have

been operating a long-turn operation to ruin my reputation intellectual property and work relationships successfully

holding me a hostage for a period of seven years following a long-run kidnapping and harassment attempts leading

to a ruined career intellectual property violation and work relationships.

Operating a remotely-operated gas pump with azbest targeted at my place Bulgarian law enforcement in con-

stitution with DANS (State Agency for National Security) appear to have successfully tracked down and manipulated

my life-being following a successful set of long-run kidnapping and harassment attempts leading to a successfully

ruined career intellectual property violation and work relationships.

It appears that Bulgarian law enforcement in constitution with DANS (State Agency for National Security) have

placed remote stickers on my place and have managed to successfully map my place leading to a successful illegal

473

entry courtesy of an unknown person followed by another unknown person supposedly a colleague followed by

an illegal entry courtesy of unknown police officers who took my ID and escorted me to a local institution without

explaining the reason for holding me hostage there.

It appears that the group is operating a transperant using feelings to map and touch point related activities of

the individuals in place following a successful kidnapping and harassment attempt leading to illegal entry and

possible kidnapping attempt. It appears that Bulgarian law enforcement in constitution with DANS (State Agency

for National Security) have managed to place a plastic sticker in my mouth leading to a successful monitoring and

tracking including the use of a transperant leading to a successful kidnapping and harassment attempt leading to a

ruined career intellectual property violation and work relationships.

UPDATE: Prior, to, my, visit, at, a, local, hotel, (**hxxp://central-hotel.com/en; central@central-hotel.com**), some, of, my, clothes, were, missing.

UPDATE:

It,

appears,

that,

my,

place,

was,

recently,

supposedly,

visited,

by,

Pla-

men,

Dakov

(**hxxp://universalstroi.com**),

Hristo,

Radionov

(**hxxp://universalstroi.com;**

477

hxxp://www.facebook.com/hristo.radionov), and, Ivailo, Dochkov (**hxxp://www.facebook.com/ivodivo**), who,

left, money, for, me.

UPDATE: Prior,

to,

my,

attendance,

in,

a,

local,

institution (**dpblovech@abv.bg**),

Ivailo,

Dochkov

(**hxxp://www.facebook.com/ivodivo**), tried, to, meet, me.

UPDATE: Prior, to, my, attendance, at, this, particular, apartment, I, was, invited, by, Briana Papa (**Bri-**

ana@crenshawcomm.com), to, visit, Prague, on, behalf, of, Avast! Software, where, I, met, with, Vince Steckler

(**steckler@avast.com**), and, Miloslav, Korenko (**korenko@avast.com**), where, I, met, with, Lucian Constantin

(**hxxp://twitter.com/lconstantin**).

Prior, to, my, attendance, at, this, apartment, I, was, also, invited, to, another, event, held, at, INTERPOL, by, Steve

Santorelli

(**steve.santorelli@gmail.com**), which, I, successfully, attended, and, presented, at, where, I, also, met, with, Krassimir Tzvetanov (**krassi@krassi.biz**).

Something, else, worth, pointing, out, is, that, my, place, is, visited, by, an, unknown, woman,

known,

as,

Boriana Mihovska,

an,

unknown,

man,

known,

as,

Leonid,

an,

unknown,

person,

known,

as,

Tzvetan

Georgiev

([hxxp://www.youtube.com/user/laron640](https://www.youtube.com/user/laron640);

tzvetan.leonid@gmail.com);

([hxxp://plus.google.com/107108766077365473231](https://plus.google.com/107108766077365473231)),

and, an, unknown, person, known, as, Dobrin Danchev

([hxxp://www.facebook.com/dobrin.danchev](https://www.facebook.com/dobrin.danchev));

([hxxp://www.sibir.bg/parachut](https://www.sibir.bg/parachut)), and, another, unknown,
person,

known, as, Ina, Dancheva

(<http://otkrovenia.com/bg/profile/innadancheva>).

The, most, recent, visit, to, my, place, was, by, a, person,
known, as, Vasil, Stanev, from DANS (**dans@dans.bg**), who,

was, supposedly, asking, me, to, take, a, job, and,
consequently, asked, me, to, attend, a, doctor, session.

Dear, blog, readers, I, feel, it's, about, time, I, post, an,
honest, response, regarding, my, [152]disappearance, in,

[153]2010, with, the, [154]purpose, of, [155]information, my,
[156]readers, on, my, [157]current, situation, and,

478

[158]to, continue, [159]posting, and, contributing, valuable,
threat, intelligence, to, the, security, community.

In, 2010, I, moved, to, an, apartment, located, in, another,
town, and, apparently, my, apartment, have, been,

vandalized, including, persistent, harassment, by, my,
neighbors, including, a, possible, illegal, entry, courtesy, of,

the, person, responsible, for, hiring, the, apartment (Kalin
Petrov; **kalin_petrov@hotmail.com**).

After, a, persistent, chase, down, and, harassment, courtesy,
of, the, person, responsible, for, hiring, the, apartment,

I, received, a, notice, to, leave, and, had, my, apartment,
visited, by, the, person, responsible, for, hiring, including,

another, man, including, another, man, that, was,
supposedly, supposed, to, take, care, of, my, belongings.

Prior, to, my, accommodation, I, was, contacted, by, Pauline,
Roberts (**pauline.roberts@ic.fbi.gov**), who, recom-

mended, me, to, Yavor, Kolev (**javor.kolev@gmail.com**),
and, Albena, Spasova (**albaadvisors@gmail.com**), from,

Bulgarian, local, authorities, followed, by, a, series, of, communication.

Prior, to, returning, to, my, place, in, 2011, my, house, was, vandalized, by, three, police, officers (**hxxp://trojan-**

police.com; police _trojan@abv.bg), from, the, local, police, department, who, entered, my, house, in, particular, my, bedroom, and, unpolitely, asked, my, to, dress, while, showing, me, a, copy, of, my, personal, ID, that, I, haven't,

presented, and, taking, me, to, an, unknown, car, without, explaining, the, reason, for, taking, me.

490

A, few, hours, later, I, find, myself, located, in, an, institution (**dpblovech@abv.bg**), for, a, period, of, three, months, without, anyone, explaining, the, reason, for, holding, me, there.

Upon, entering, I, had, my, phone, taken, without, having, received, any, sort, of, explanation, for, taking, me,

and, holding, me, there.

UPDATE: My most recent visit to local police department was to announce a possible food-poisoning and I

was told not to live in my place.

Given, this, circumstances, I, feel, that, it, has, become, highly, unproductive, to, continue, my, work, and,

therefore, I'm, currently, seeking, a, permanent, relocation, including, a, possible, full, time, career, opportunity, in,

the, field, of, cybercrime, research, security, blogger, or, threat, intelligence, analyst.

491

In case you're aware of someone looking to hire full-time threat intelligence analyst cybercrime researcher or a

security blogger feel free to approach me at dancho.danchev@hush.com

Introducing Unit-123.org - Cyber Threat Intelligence Portal (2019-04-12 21:41)

Dear blog readers, I wanted to take the time and effort and introduce you to my latest project called [1]Unit-123.org

where you can find quality research articles in a variety of topics that I will be publishing on a daily basis with the

idea to bring back the spirit of my editorial years and to continue spreading quality data information and knowledge to a loyal base of users and readers.

Feel free to reach me at dancho.danchev@hush.com

Stay tuned!

1. <http://unit-123.org/>

Flashpoint Intel Official Web Site Serving Malware - An Analysis (2019-04-22 08:32)

UPDATE: Flashpoint Intel issued a [1]**response** to my research.

UPDATE: [2]**SCMagazine** picked up the story.

UPDATE: [3]**Anti-Malware.name** picked up the story.

UPDATE: [4]**EnterpriseTimes** picked up the story

UPDATE: [5]**Rambler News** picked up the story.

It appears that [6]**Flashpoint's official Web site** is currently embedded with malware-serving malicious script potentially exposing its visitors to a multi-tude of malicious software.

Original malicious URL hosting location:

hxxp://www.flashpoint-intel.com/404javascript.js

hxxp://www.flashpoint-intel.com/404testpage4525d2fdc

Exposing Yet Another Currently Active Fraudulent and Malicious Pro-Hamas Online Infrastructure

(2019-05-04 19:45)

Love them or hate them - the ubiquitous beautiful girl utilizing fake bogus and rogue Facebook accounts scam

campaign courtesy of Hamas targeting Israeli soldiers has to come to an end.

In this post I'll provide actionable intelligence on a currently active Pro-Hamas malicious and fraudulent infras-

tructure and will discuss in-depth the tactics techniques and procedures of the cybercriminals behind it and will

offer in-depth perspective on a currently active Pro-Hamas hosting provider - " [1]*Nepras for Media & IT*" which is basically a legitimate front-end company currently involved in a variety of Pro-Hamas malicious and fraudulent

malware-serving and propaganda spreading online infrastructure provider directly related to yet another Pro-Hamas

franchise - " *Modern Tech Corp*".

Sample Facebook Profile Names involved in the campaign:

Elianna Amer

Aitai Yosef

Karen Cohen

Amit Cohen

Loren Ailan

Verena Sonner

Lina Kramer

Sample profile photos of Pro-Hamas fake and rogue Facebook accounts:

Historical OSINT - Profiling the Loads.cc Enterprise (2019-05-04 22:27)

Remember **[1]loads.cc**? In this post I'll provide actionable intelligence on the popular DDoS for hire service circa

2008 and offer in-depth perspective on the tactics utilized by the gang behind the service for the purpose of earning

fraudulent revenue in the process of monetizing access to malware-infected hosts.

Sample malicious and fraudulent infrastructure known to have participated in the campaign:

hxxp://loads.cc - hxxp://ns1.udnska.cn (72.21.52.99), interestingly, hxxp://sateliting.cn is the C & C for hxxp://loads.cc service.

Related malicious and fraudulent URLs known to have participated in the campaign:

Historical OSINT - Massive Scareware Serving Campaign Spotted in the Wild (2019-05-04 22:41)

With scareware continuing to proliferate I've recently intercepted a currently active malicious and fraudulent blackhat

SEO campaign successfully enticing thousands of users into interacting with the rogue and malicious software with

the scareware behind the campaign successfully modifying the HOSTS on the affected host potentially exposing the

user to a variety of fake search engines type of rogue and fraudulent and malicious activity.

In this post I'll provide actionable intelligence on the infrastructure behind the campaign.

Sample malicious URL known to have participated in the campaign:

hxxp://guardsys-zone.com/?
p=WKmimHVmaWyHjsblo22EeXZe0KCfZlbVoKDb2YmHWJjO
xaCbk

X1

%2Bal6orKWekJXIZWhimmVummWlo6THodjXoGJdpqmikpVu
Z21uaHFtb1 %2FEkKE %3D

Sample malicious MD5 known to have participated in the campaign:

MD5: 665480a64d4f72a33120251c968e9c28

Once executed the sample modifies the HOSTS and redirects them to the following domains:

hxxp://google-reseach.com/gfeed/click.php?q= &p=1 -
66.36.243.201

hxxp://google-reseach.com/search.php? &aff=32210
&saff=0 &q=

Related malicious rogue and fraudulent URL known to have participated in the campaign:

hxxp://88.85.73.139/landing/

Sample rogue and fraudulent payment processed used in the campaign:

hxxp://safetyself.com/safereports/ - 88.85.73.139

527

Historical OSINT - Yet Another Massive Scareware Serving Campaign Courtesy of the Koobface Gang

(2019-05-05 16:47)

It's 2010 and I've recently intercepted a currently circulating malicious and fraudulent scareware-serving campaign

courtesy of the Koobface Gang this time successfully typosquatting my name within its command and control infrastructure.

In this post I'll provide actionable intelligence behind the campaign and will discuss in-depth the infrastructure behind it.

Sample malicious and fraudulent domains known to have participated in the campaign:

hxxp://qjcleaner.eu/hitin.php?affid=02979

Sample malicious MD5 known to have participated in the campaign:

MD5: 8df3e9c50bb4756f4434a9b7d6c23c8c

Once executed a sample malware phones back to:

hxxp://212.117.160.18/install.php?id=02979

which is basically our dear friends at AS44042 ROOT-AS root eSolutions

Parked at the same IP where **[1]Crusade Affiliates** continue serving a diverse set of fake security software are also **[2]more scareware domains**.

It's also worth pointing out that the Koobface gang has recently started typosquatting various domains using my name. Koobface gang is **[3]typosquatting my name for registering domains ([4]for instance** Rancho Ranchev; Pancho Panchev etc.) including hxxp://mayernews.com -

which is registered to Danchev Danch
(1andruh.a1@gmail.com).

528

Historical OSINT - Yet Another Massive Scware-Serving Campaign Courtesy of the Koobface Gang

(2019-05-05 17:19)

It's 2010 and I've recently come across yet another currently active scware-serving campaign courtesy of the

Koobface gang this time successfully introducing a CAPTCHA-breaking module potentially improving the propagation

and distribution scale within major social networks.

In this post I'll discuss the campaign and provide actionable intelligence on the infrastructure behind it.

Related malicious domains known to have participated in the campaign:

Proprietary Threat Intelligence Reports Available On Demand - Request a Copy Today! (2019-05-28 20:46)

Dear blog readers - I wanted to let everyone know of two - currently in the works - proprietary Threat Intelligence

type of reports - that you and your organization can easily acquire on demand. The first report details in-depth

including tactics techniques and procedures including hundreds of IOCs (Indicators of Compromise) in terms of the

Pay-Per-Install Business Model circa 2008 - worth \$1,500 and the second report which is also available on demand

details the inner workings of the CAPTCHA-Solving Underground Market Business Model - which is also worth \$1,500.

Similar my most recently - now publicly available - report on " **[1]Assessing The Computer Network Operation (CNO)**

Capabilities of the Islamic Republic of Iran - Report" capabilities including a complimentary social network graph - the proprietary Threat Intelligence reports can be requested online - and the user including the organization will receive a

complimentary copy of the report - including a possible attribution vector - within 30 days prior to making a purchase.

How you can order a copy of the report?

Feel free to approach me at dancho.danchev@hush.com to inquire about making a purchase.

Stay tuned!

1. https://ddanchev.blogspot.com/2015/07/assessing-computer-network-operation_29.html

531

Proprietary Cybercrime and Dark Web Forum Search Engine - BETA Access Available! (2019-05-28 20:48)

Dear blog readers - I wanted to let everyone know of a currently active BETA project - namely - the general invite-

only proprietary access to a Cybercrime and Dark Web Underground Forum Search Engine - exclusively targeting

Security Vendors the U.S Intelligence Community and Law Enforcement including independent-vetted invite-only

subscription-based access to the World's largest and near-real-time repository of Cybercrime Research Data - worth

\$3,500 in the form of one-time payment - for the purpose of fueling growth into the project - and to request the

necessary access - including possible subscription-based agreement - further fueling growth into the project and the

quality of the inventory of data.

How to request access?

Feel free to approach me at dancho.danchev@hush.com with your inquiry in terms of this project.

Stay tuned!

532

Dancho Danchev's Blog - Public Comments Now Open! (2019-05-29 08:38)

Dear blog readers,

Ever since 2005 where I originally launched this blog - I decided to turn off public comments so that I can

present a decent portion of my Information Security knowledge to a diverse set of audiences. Back in the glorious

Web 2.0 years when I was busy doing business development and PR outreach for a variety of Security Projects I've

recently decided that the time has come to open public comments on one of the Security Industry's most popular

personal blogs on Information Security Cybercrime Research and Threat Intelligence with the idea to reach out to

everyone reading this blog potentially building a high-quality comment and research feedback network of Security

Industry members U.S Intelligence Community members and the general public.

Looking forward to receiving your comments - and as always feel free to go through the archives to catch up

with what I've been up to.

Stay tuned!

533

Dancho Danchev's Blog - Audio Version Available - Listen to Every Post! (2019-05-30 16:15)

Dear blog readers,

I wanted to let everyone know that I've recently introduced an audio-listening functionality to every blog post

basically allowing you to listen to every blog post on this blog. What do you think?

Basically it allows you to easily plug and play your head-set and listen on current historical and upcoming

posts. Stay tuned for an updated set of features to be implemented anytime soon.

Consider going through the following high-profile Security Interviews which I managed to produce throughout

2003-2006 while working for **[1]Astalavista Security Group**.

- **[2]Security Interviews 2004/2005 - Part 1**

534

- **[3]Security Interviews 2004/2005 - Part 2**

- **[4]Security Interviews 2004/2005 - Part 3**

including the following commentary and Open Letter to the U.S Intelligence Community:

- **[5]The Threat Intelligence Market Segment - A Complete Mockery and IP Theft Compromise - An Open Let-**

ter to the U.S Intelligence Community

Enjoy and stay tuned!

535

Upcoming Security Project - Accepting Donations and Feedback! (2019-05-30 17:11)

Dear blog readers I wanted to let everyone know that I've recently added a "Donate Today!" button including a

Pop-Up banner within my blog with the idea to **[1]seek you donations and feedback** to raise the necessary capital

for an upcoming Security Project.

How you can contribute in case you're a long-time reader of this blog - and want to possibly see more high-

quality Security and Cybercrime research? Consider making a modest \$500 donation - which will better help me to

scale the project and eventually launch it.

Feel free to approach me at dancho.danchev@hush.com

Stay tuned!

Exposing Bulgaria's Largest Data Leak - An OSINT Analysis (2019-07-27 10:46)

I've recently come across to a news article detailing the recently leaked Bulgaria NAP records database and I decided

to take a closer look. What does this leak basically constitute? Basically the attacker managed to compromise the

security of the Web Site basically leading to a successful extraction of a decent-portion of data which could basically

constitute a leak.

NOTE: The data in this analysis has been obtained using public sources.

539

In this post I'll profile a novice Bulgaria-based cybercriminal that basically managed to obtain access to the

database and shared it within several cybercrime-friendly forum communities making it publicly accessible including

an in-depth overview of TAD Group which is basically a Bulgaria-based penetration testing company.

Real Name: Daniel Ganchev - Email: daniel.ganchev@abv.bg

Sample URL of the cybercriminal involved in the campaign:

hxxp://instakilla.com/ - Email: wp@instakilla.com; info@instakilla.com

Instagram Account: hxxp://www.instagram.com/instakilla_/_/

540

Bitcoin address used in the campaign:
3Ex6LeHorgRjkBmws4SsRZ3FXSJDk5FhP

Sample additional domain known to have been used by the same individual: hxxp://209.250.232.143

Related URLs known to have participated in the campaign:

https://instakilla.com/5k.txt

<https://instakilla.com/teaser.txt>

Sample Screenshot of the Original Letter Send to Journalists:

541

Let's take a closer look at the Bulgaria-based TAD-Group is basically a well-known penetration testing company

currently running Bulgaria's largest and most popular hacking forum community - **hxxp://www.xakep.bg** which was

recently blamed for Bulgaria's largest database leak in particular its founders and several employees in the context

of performing an OSINT analysis basically highlighting some of the key functions of the company and its involvement

in the incident.

Sample Company Logo:

542

Sample Hacking Forum Logo:

Sample Exploits Developed courtesy of the founder of the group:

We'll be keeping an eye on the campaign and we'll post updates as soon as new developments take place.

553

Who's Behind the Syrian Electronic Army? - An OSINT Analysis (2019-07-28 18:19)

Continuing the " **[1]FBI Most Wanted Cybercriminals**" series I've decided to continue providing actionable threat intelligence on some of the most prolific and wanted cybercriminals in the World through the distribution and

dissemination of actionable intelligence regarding some of the most prolific and wanted cybercriminals.

Following a series of high-profile Web site defacement and social media attack campaigns largely relying on

the utilization of good-old-fashioned social engineering attack campaigns - it appears that the individuals behind the

Syrian Electronic Army are now part of **[2]FBI's Most Wanted Cyber Watch List** which means that I've decided to

conduct an **[3]OSINT analysis** further sharing actionable intelligence behind the group operators with the idea to

assist law enforcement and the U.S Intelligence Community with the necessary data which could lead to a successful

tracking down and prosecution of the team behind these campaigns.

In this post I'll provide actionable intelligence on the group behind the Syrian Electronic Army including action-

able intelligence on the infrastructure on some of their most prolific social engineering driven campaigns.

Profiling a Currently Active Portfolio of High-Profile Cybercriminal Jabber and XMPP Accounts

(2019-07-29 17:05)

In a world dominated by **[1]fraudulent propositions** it should be noted that Jabber and XMPP remain the primary secure communication channel for a large portion of cybercrime-friendly propositions that I come across to on a daily basis largely relying on **[2]Off-The-Record** type of functionality.

I've recently come across to a public list of harvested and data-mined high-profile cybercriminal's Jabber accounts and I've decided to share it with my blog readers for the purpose of establishing the foundations for a successful "**[3]lawful surveillance**" and "**[4]lawful interception**" type of operational activity.

Exposing Evgeniy Mikhaylovich Bogachev and the "Jabber Zeus" Gang - An OSINT Analysis

(2019-07-29 17:18)

Continuing the " **[1]FBI Most Wanted Cybercriminals**" series I've decided to take a closer look at the "Jabber Zeus"

including **[2]Evgeniy Mikhaylovich Bogachev** for the purpose of providing actionable intelligence on the fraudulent

and malicious infrastructure that was utilized in the campaign including personally identifiable information of the

individuals behind it with the idea to assist law enforcement and the U.S Intelligence community with the necessary

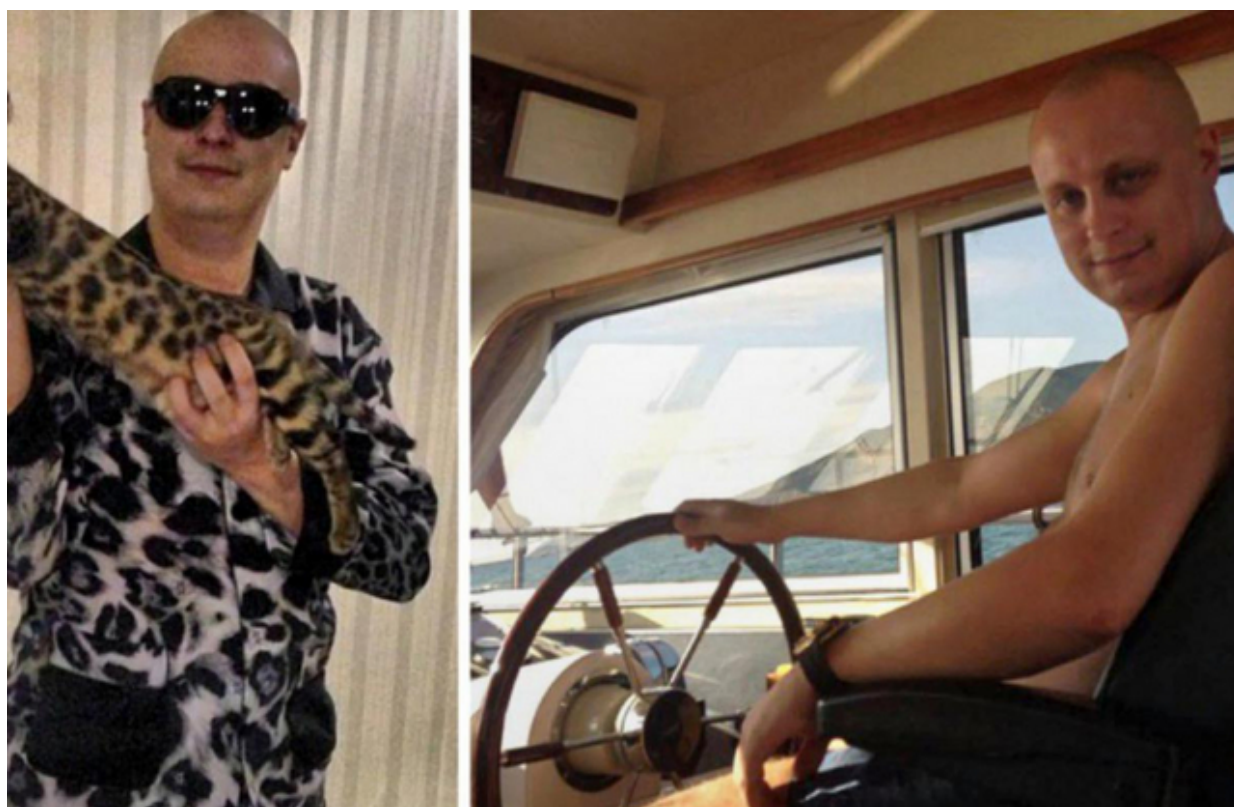

data to track down and prosecute the individuals behind the campaign.

In this post I'll provide actionable intelligence on the infrastructure used by the "Jabber ZeuS" gang including

personally identifiable information for Evgeniy Mikhaylovich Bogachev and some of his known associates.

Sample Personal Photos of Evgeniy Mikhaylovich Bogachev:

922

Slavik's IM and personal email including responding IP:

bashorg@talking.cc - 112.175.50.220

Personal Address:

Lermontova Str. Anapa, Russian Federation

Instant Messaging account:

lucky12345@jabber.cz

Related name servers:

ns.humboldttec.cz - 88.86.102.49

ns2.humboldttec.cz - 188.165.248.173

Related domains part of a C &C phone-back location:

hxxp://slaviki-res1.com

hxxp://slavik1.com - 91.213.72.115

hxxp://slavik2.com

hxxp://slavik3.com

Slavik's primary email:

luckycats2008@yahoo.com

Slavik's ICQ numbers:

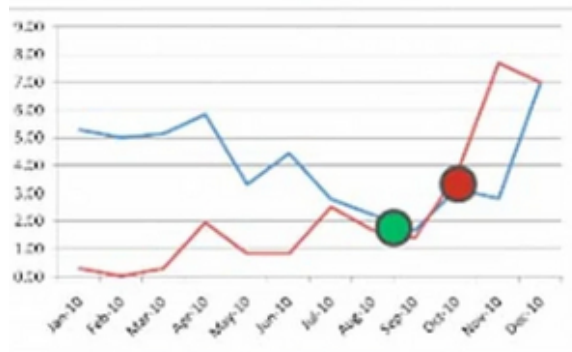

ICQ - 42729771

ICQ - 312456

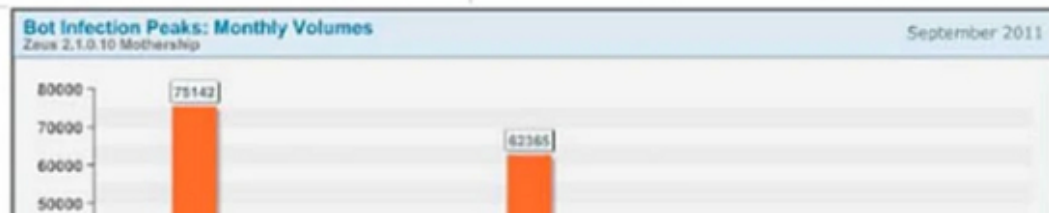

923

Zeus 2 vs. Zeus 2+

Is the Zeus Project really dead?

Profiling "Innovative Marketing" - The Flagship Malvertising andf Scareware Distributor - Circa 2008 - An

OSINT Analysis (2019-07-30 14:50)

Continuing the " **[1]FBI Most Wanted Cybercriminals**" series I've decided to take a closer look at " **[2]Innovative Marketing**" the primary malvertising and scareware distributor participating in several high-profile malvertising

and scareware-serving campaigns circa 2008 including personally identifiable information on two of the main group

operators - **[3]Shaileshkumar P. Jain** and **[4]Bjorn Daniel Sundin** with the idea to provide law enforcement and the U.S Intelligence community with the necessary information to track down and prosecute the gang behind these

campaigns.

928

In this post I'll profile actionable intelligence on the infrastructure behind the "Innovative Marketing" malvertising and scareware distributor circa 2008 including personally identifiable information on two of the key members of the gang.

Known "Innovative Marketing" alternative brand names and related associates:

Assessing the Recently Leaked FSB Contractor Data - A Peek Inside Russia's Understanding of Social Net- work Analysis and Tailored Access Operations (2019- 08-02 15:20)

I've recently managed to obtain a copy of the recently leaked FSB contractor data courtesy of 0v1ru \$ and "Digital

Revolution" and I've decided to take a closer look including an in-depth overview and discussion of the leaked data

in the context of today's modern-driven AI-powered automated OSINT technologies in the broader context of the

U.S Intelligence Community in particular the utilization of rogue TOR exit nodes for the purpose of intercepting

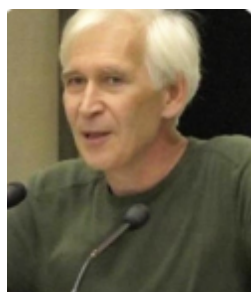

and harvesting TOR exit node data within the Russian Federation including social-network analysis data-mining and

possible "lawful surveillance" and "lawful interception" including possible data collection type of Tailored Access Operation campaigns launched by " **Oday Technologies**" and " **SyTech**".

Sample Company Logo:

Sample Company Logo:

950

Sample personal photos of the individuals behind "Oday Technologies" and "SyTech":

951

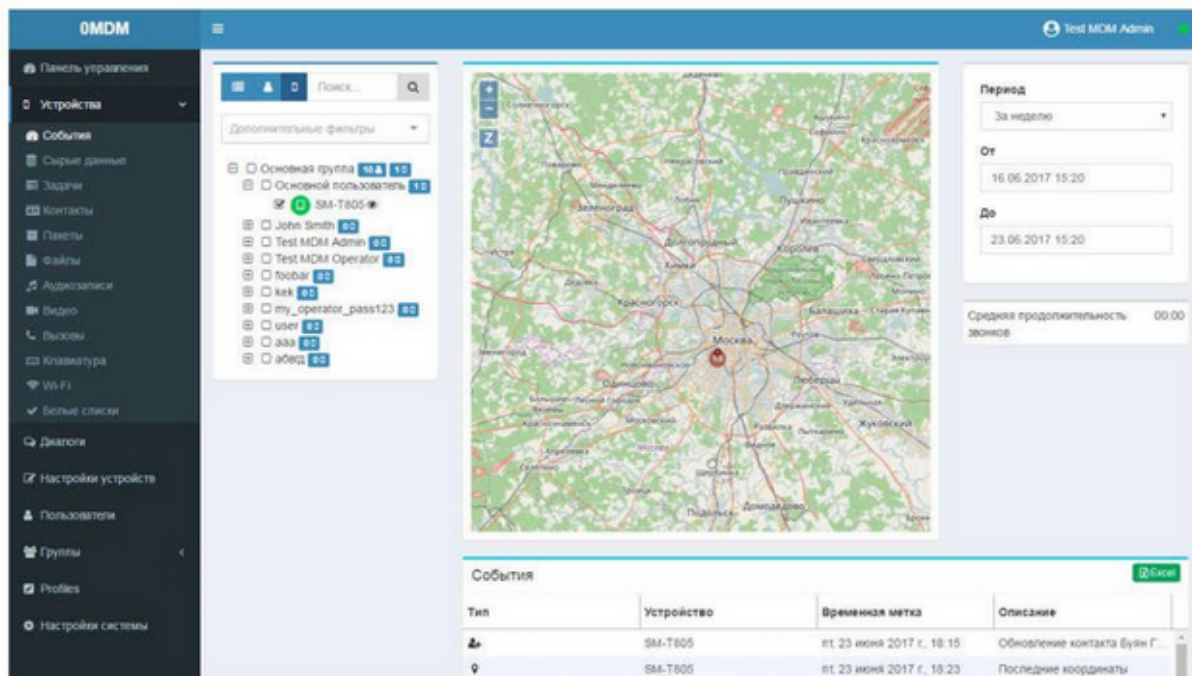

Sample Screenshots of the User-Interface behind the "Lawful Surveillance" and "Lawful Interception":

952

The screenshot displays the OControl user interface. On the left is a dark sidebar with navigation options: Панель управления, Устройства, События, Сервис данных, Задачи, Контакты, Папки, Файлы, Адреса, Входы, Выходы, Коллекция, ИИ-П, Базы данных, Карта, Дневник, Настройка устройств, Пользователи, Группы, Профили, and Настройка системы. The main area is titled 'Пакеты' (Packages) and shows a list of installed applications on a device (SM-T805). The list includes columns for the package name, version, and application name. A search bar and a list of additional features are visible at the top of the main area.

Historical OSINT - The Russian Business Network Says "Hi" (2019-09-09 15:27)

You know you're popular when "they" say "hi".

It's 2009 and I've received a surprising personal email courtesy of guess who - The Russian Business Network

showing off the actual ownership of the hxxp://rbnnetwork.com domain and basically saying "hi". It's worth pointing out that throughout 2008-2013 I've extensively profiled the activities including the customer activities of some of

the most prolific customers and members of the infamous Russian Business Network also known as the RBN in

the context of **[1]blackhat SEO [2]iFrame** and **[3]input validation** abuse across major **[4]Web properties** including

[5]malvertising and various other **[6]malware-serving** and **[7]client-side exploits serving campaigns** including

[8]money mule recruitment and **[9]phishing campaigns** the ubiquitous at the time **[10]fake security software also known as scareware** in a variety of post series.

- Related post - **[11]Dissecting a Sample Russian Business Network (RBN) Contract/Agreement Through the**

Prism of RBN's AbdAllah Franchise

It's been a decade since I last profiled the most prolific and sophisticated market-leading bullet-proof hosting

cybercrime enterprise - the Russian Business network which at the time was dominating the majority of campaigns

that I was busy profiling with the help of fellow researchers to whom I owe a big deal of thanks for approaching me

circa 2008-2013 namely **[12]Jart Armin** and **[13]James McQuaid** with whom I've been directly or indirectly keeping

in touch throughout 2008-2013 for the purpose of offering quality research on the activities of the Russian Business

958

Network including their customers and fraudulent and malicious campaigns.

Join Me on Patreon Community! (2019-09-09 18:07)

Dear blog readers,

I decided to let everyone know that I've recently launched my own **[1]Patreon Community Page** with the idea

to let everyone know that I'm currently busy crowd-funding a high-profile upcoming Cyber Security Investment

Project - and I would love to hear from you more details about your thoughts regarding new Tier Features and

whether or not you could make a possible long-term type of financial donation or sponsorship regarding my research

and my security expertise.

The current status of the project:

- I'm currently busy soliciting additional input from colleagues regarding upcoming Tier Features

- I'm currently busy reaching out to colleagues to possibly convert them to Patreon Sponsors

- I'm currently busy working on a high-profile Security Podcast

- I'm currently busy working on a high-profile Security Newsletter

Has my research helped you or your organization in the past? Have you been a long-time blog reader? Have

you learned something new? Did my active cybercrime and nation-state actor profiling helped you excel in your

career path? Are you happy with what you're seeing? Dare to take a moment and refer a colleague or an organi-

zation my personal blog including my **[2]Patreon Community Page** including a possible Patreon Sponsor request

confirmation?

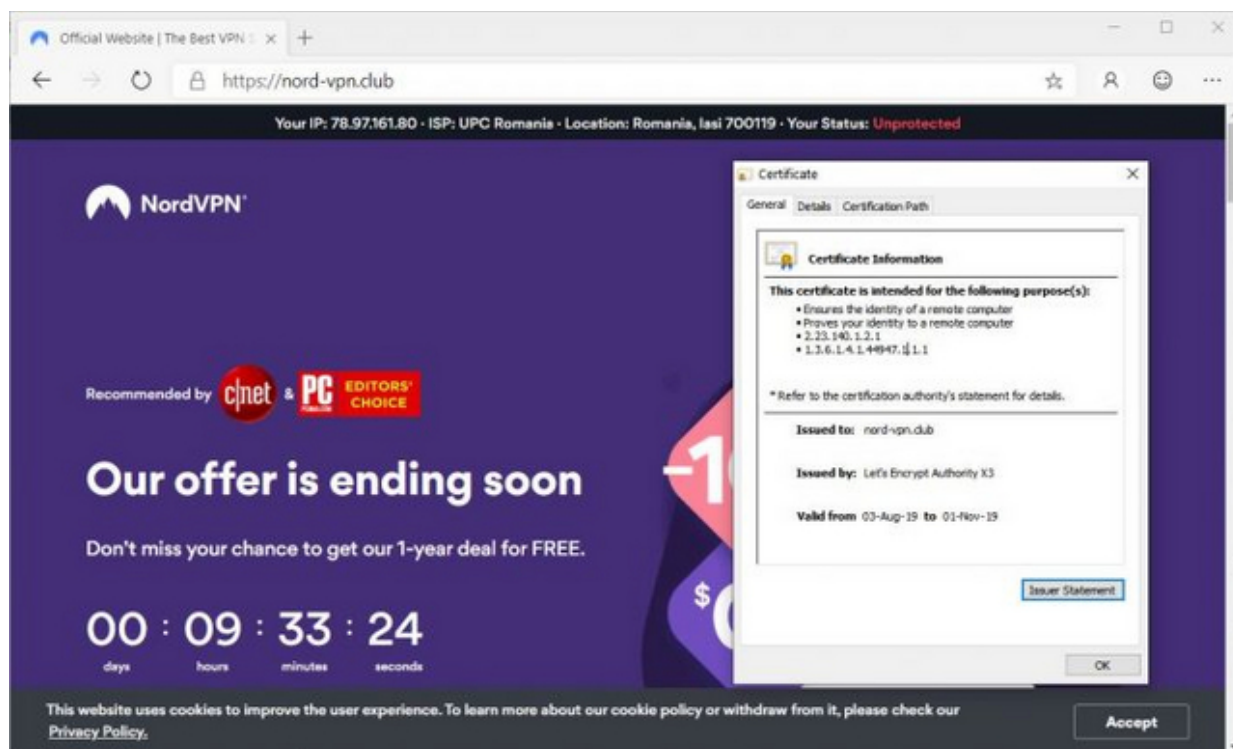

Looking forward to hearing from you at - dancho.danchev@hush.com

Enjoy!

Fake NordVPN Web Site Drops Banking Malware Spotted in the Wild (2019-09-11 16:53)

I've recently come across to a rogue NordVPN web site distributing malicious software potentially exposing NordVPN users to a multi-tude of malicious software further compromising the confidentiality availability and integrity of the

targeted host to a multi-tude of malicious software.

In this post, I'll provide actionable intelligence on the infrastructure behind the campaign and discuss in-depth the tactics techniques and procedures of the cybercriminals behind it.

Sample malicious URL known to have participated in the campaign:

hxxp://nord-vpn.club - 192.64.119.159; 2.56.215.159

#DANCHEV DANCHEV Does anyone know ..Is there a way I can determine the exact date that Dancho Danchev began to "unfollow" me?

Historical OSINT - Georgian Justice Department and Georgia Ministry of Defense Compromised Serving

Malware Courtesy of the Kneber Botnet (2019-09-11 19:07)

It's 2010 and I've recently come across to a compromised Georgian Government Ministry of Defense and Ministry of

Justice official Web site spreading potentially participating in a wide-spread phishing and malware-serving campaign

enticing users into interacting with the rogue U.S Intelligence and U.S Law Enforcement themed emails for the

purpose of spreading and dropping malicious software on the targeted host's PC.

Sample malicious URL known to have participated in the campaign abusing common Web Site redirection applica-

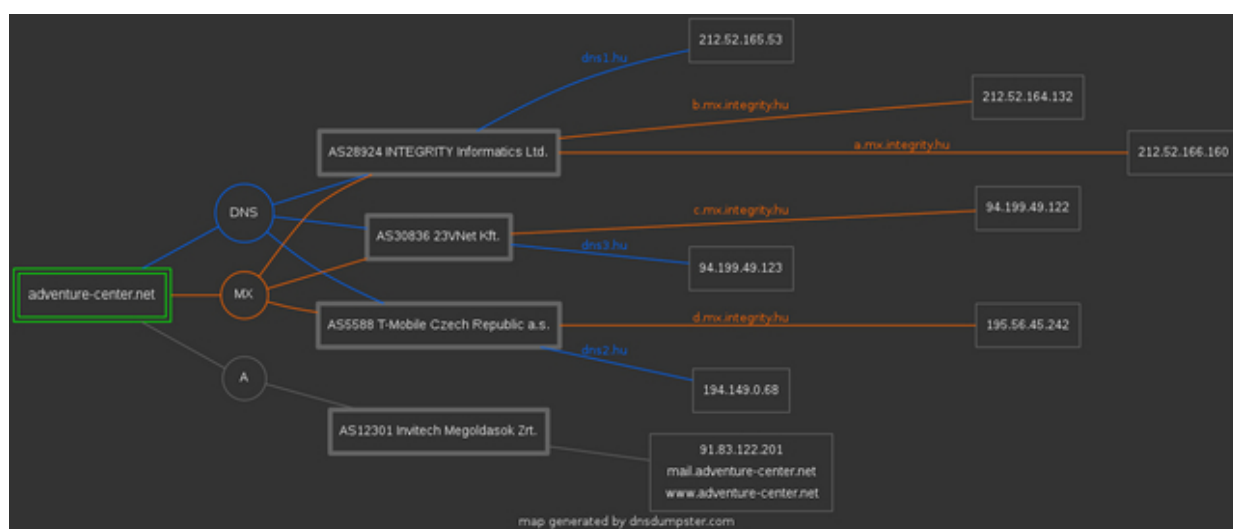

tion vulnerability flaw:

hxxp://www.mod.gov.ge/2007/video/movie.php?l=G &v=%20 %3E %20a %20href %20http %3A %2F %2Foffi-

cialweightlosshelp.org %2Fwp-admin %2Freport.zip %20 %3EDownload %20 %3C %2Fa %3E %20script %3Ewin-

dow.OPEN %20http %3A %2F %2Fofficialweightlosshelp.org %2Fwp-admin %2Freport.zip %20 %3C %2Fscript %3E

%20 #05184916461921807121

Related malicious URLs known to have participated in the campaign:

hxxp://officialweightlosshelp.org/wp-admin/report.zip

Spread URL found within the config:

hxxp://www.adventure-center.net/upload/x.txt - 195.70.48.67

Related compromised malicious URLs known to have participated in the campaign:

hxxp://new.justice.gov.ge/files/Headers/in.txt

hxxp://new.justice.gov.ge/files/Headers/fresh.txt

hxxp://new.justice.gov.ge/files/Headers/rollers1.php

I'm Back! (2019-09-17 09:56)

Dear blog readers - it's been a while since I've last posted a quality update following my [1]**disappearance and**

possible kidnapping attempt circa 2010 but as many of you have noticed I've recently published a variety of

research and CYBERINT type of articles in a variety of areas which means that I'll be shortly returning to the usual

blogging rhythm successfully publishing a quality set of research articles anytime soon. I've also wanted to let you

know that I've recently launched an extremely popular News Portal called [2]**Unit-123** offering practical advice to

the U.S Intelligence Community including Cyber Warriors and Cyber Warfare experts including a Cyber Security and

Hacking Community called [3]**Offensive Warfare** including a Bitcoin soliciting bid on the Dark Web for the upcoming

launch of a proprietary custom-based Virtual Reality Social Network for Hackers and Security Experts called

[4]Cybertronics

(dzxvmqrl3rjxbzuer6vv5ejahniz2nefqxfmwspfmvzjo4xxzm7n4xad.onion) including the usual

interview spree in an attempt to land a permanent job position as I've been working on a variety of personal and

proprietary Security and OSINT projects.

969

In this post I'll walk you through the story of my disappearance including a brief introduction and explanation of my

"hacker enthusiast" years circa the 90's where I've been busy doing "lawful surveillance" and "lawful interception"

throughout my teenage years while I was not busy working full-time with several H/C/P/A

(Hacking/Cracking/Phreaking/Anarchy) groups as a full-time member practically setting up the foundations of the

Threat Intelligence market segment a few years later including the basics of Technical Collection type of position

including Independent Contractor working under NDA in a post 9/11 World including a personal greeting to

everyone who's been approaching me and reaching out offering support and technical and operational "know-how"

including general "say hi" advice.

970

I want to express a personal gratitude to a good old research friend - **[21]Internet Anthropologist** - who actually

[22]initiated a track-down action and managed to indirectly find me circa 2010 with the help of international and

Bulgarian law-enforcement including fellow colleagues and friends from the Security Industry and U.S Intelligence

Community circa 2008-2013 who attempted to track me down and find out more about my disappearance.

In this post I'll discuss my visit to the GCHQ circa 2008 with the HoneyNet Project including an in-depth discussion on

my "lawful interception" and "lawful surveillance" experience circa the 90's throughout my teenage hacker years including an in-depth discussion on the hacking Scene that I was proud to be a member of throughout the 90's

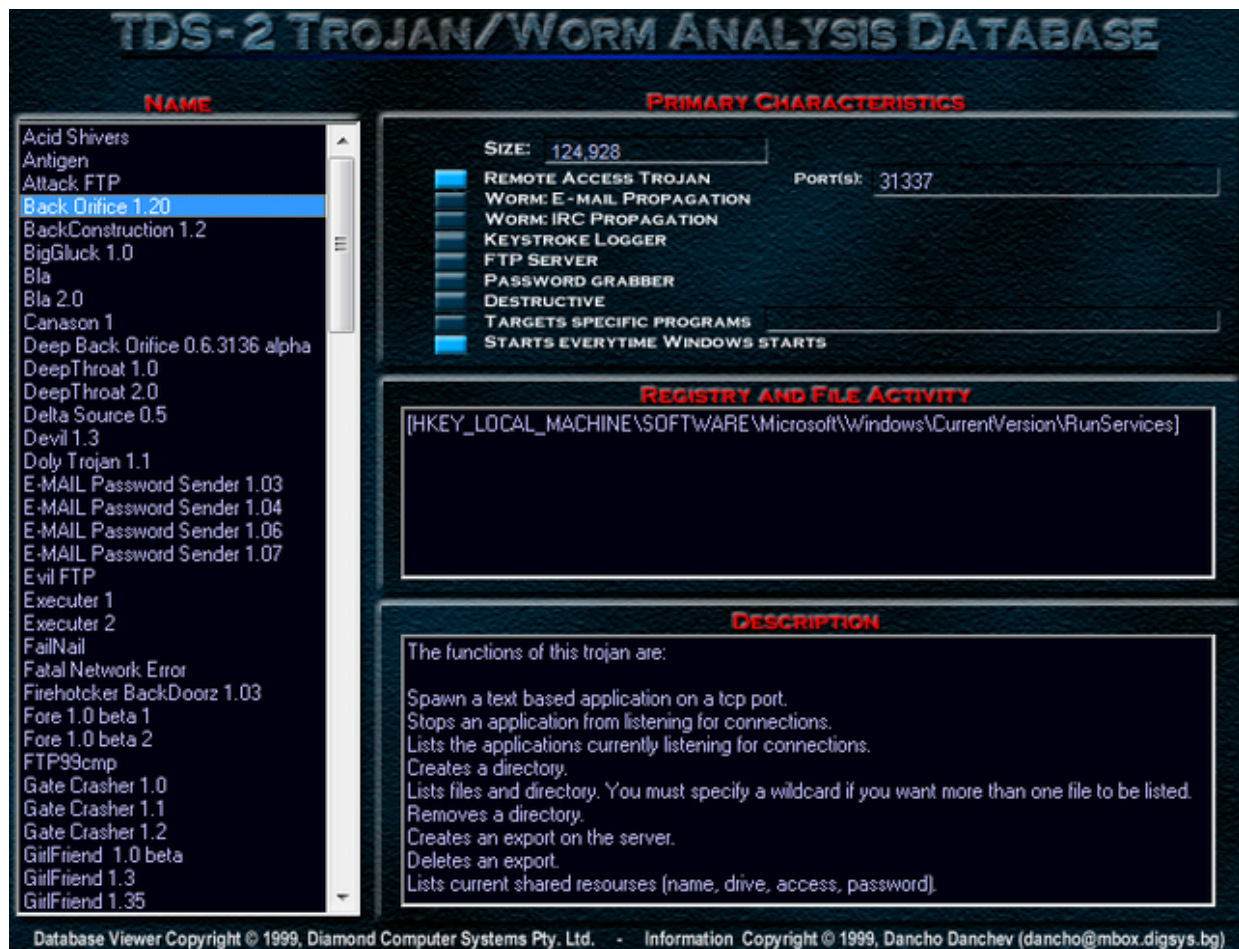

having successfully participated in a variety of community and commercial projects including a personal thanks to

the following friends and colleagues for offering support and keeping track of my research:

- **[23]Jamie Riden** for making a personal contribution to my PayPal account for research purposes
- **[24]Steve Santorelli** from Team Cymru for expressing interest in a proprietary Threats Database
- **[25]Michal Salat** for participating in a brief trial of my Threat Data service
- **[26]Ian Cook** for making a personal introduction to my current part-time employer **[27]KCS Group Europe**
- **[28]Jeffrey Bardin** from Treadstone71 who reached out and offered employment opportunity
- **[29]Harrison Cook** who's been persistently donating and reaching out to support the Offensive Warfare 2.0

community

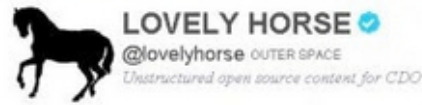

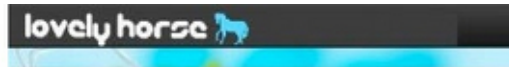

- **[30]John Young** from Cryptome.org who helped spread the word about the Offensive Warfare 2.0 Community
- **[31]Liran Sorani** from Webhose for the opportunity to participate in a part-time project

An In-depth Analysis of the Hacking Scene circa the 90's through the prism of Dancho Danchev also known as the

It's me again.This is our second issue.I've changed the design and I've added several new things in the newsletter. I've also received a lot of e-mails about our magazine. People like it and they want more information here. The first issue was short one but of course every new issue has many new things added in it. I'm happy people like it and we have MANY new subscribers every day. Also we have much more visitors than before.

Support Me And Vote For That Site If You Found What You Were Looking For Or Find It Interesting

- **I happen to have directly established a connection with one of the primary Sub7 Trojan Horse authors HeLL-**

fiReZ which makes me pretty close to **[39]Steve Gibson** in one way or another - throughout the 90's where

we exchanged Trojan Horse samples while I was busy working for Trojan Defense Suite and the infamous Lock-

down2000 anti-trojan software suite where I was busy working on signatures and help-guides compilation while

I was also busy being a member of several hacking groups primarily found on the Cyberarmy.com Top 50 Hacking

List including Progenic.com Top 100 hacking sites list.

- **Mail-bombing was a trend** - in particular my personal experience of making jokes with friends who were unable

to take care of 100+ email messages in their Inbox

- **Mass-Mailing List subscription** - in particular the fact that my friends were not capable of finding a productive

way to get rid of the messages and unsubscribe themselves

- **Telephony Denial of Service attack circa the 90's** exploiting a popular for Eastern Europe Mail2SMS mobile

provider feature - in particular the fact that it's not necessarily a pleasant experience to get rid of 100+ SMS

messages received in a short-period of time

- **"Lawful Interception" of friends** - something else that I'm not particularly proud of is my "lawful surveillance"

and "lawful interception" experience and capabilities of people that I knew and that I used to know largely

driven by the need to explore and learn more

978

- **Corporate Experience in the field of anti-trojan detection technologies and categorization** - in particular my experience in creating trojan horse signatures and writing actual technical descriptions for the purpose of improving my employer's overall detection rate for a variety of trojan horse vendors circa the 90's.

Do you remember my work from the 90's? Are you familiar with the Scene circa the 90's? Feel free to approach me -

disruptive.individuals@gmail.com or make a PayPal donation using my PayPal ID: dancho.danchev@hush.com for

the purpose of fueling growth into my research.

Massive Portfolio of APT (Advanced Persistent Threat) and RAT (Remote Access Tools) Domains Spotted

in the Wild - An Analysis (2019-09-20 17:17)

In a world dominated by thousands of currently active APT (Advanced Persistent Threat) campaigns also known as

Remote Access Tools (RATs) including trojan horses it's worth pointing out that novice cybercriminals continue relying

and actively utilizing a variety of commercial and publicly obtainable DIY (do-it-yourself) Remote Access Tools (RATs)

for the purpose of committing cyber espionage and launching malicious and fraudulent cyber espionage themed campaigns targeting thousands of users including companies and nation-state actors.

In this post I'll provide actionable intelligence on some of the most popular RAT (Remote Access Tools) cur-

rently utilized for APT (Advanced Persistent Threat) type of nation-state sponsored and tolerated cyber espionage

themed campaigns including an in-depth discussion on a massive domain portfolio of currently active C &C server

IPs known to have participated in a variety of APT (Advanced Persistent Threat) type of cyber espionage campaigns

throughout 2015-2019.

Among the most popular APT (Advanced Persistent Threat) and Remote Access Tools (RATs) releases based

on my public and proprietary sensor network remain the following currently obtainable commercial and publicly

obtainable tools:

- Casa RAT
- Bandoak RAT
- Dark Comet Rat

- Cerberus
- Cybergate
- Blackshades
- Poison Ivy
- Schwarze Sonne RAT
- Syndrome RAT
- Team Viewer
- Y3k RAT
- Snoopy
- 5p00f3r.N \$ RAT
- SpyNet
- P. Storrie RAT
- Turkojan Gold
- Bifrost
- Beast
- Shark
- Pain RAT
- xHacker Pro RAT
- Seed RAT
- Optix Pro RAT

- Dark Moon
- NetDevil
- Deeper RAT
- MiniMo RAT
- Alusinus RAT v0.8
- Babylon 1.6.0.0
- Bozok 1.4.3
- BX RAT v1.0
- Cloud Net RAT
- Comet RAT v0.1.4
- Coringa-RAT v0.1

981

- Crimson 3.0.0
- Crimson RAT 2.2.6
- ctOs 1.3.0.0
- CyberGate v1.01.12
- Dark Comet 5.3
- DarkComet Legacy
- DH Rat 0.3
- D-RAT

- Frutas RAT v0.9
- Greame RAT v1.9
- HAKOPS RAT v2
- Imminent Monitor 3.9.0.0
- Imperium RAT Cracked
- jRat
- jSpy
- jSpy RAT v0.09
- KilerRat V 10.0.0
- L6-RAT Beta
- Maus 2.0b
- Mega RAT 1.5 Beta
- MLRAT
- MQ5 RAT
- NanoCore 1.2.2.0
- NingaliNET v1.1.0.0
- NjRAT 0.7
- njRAT v0.8d By Nasser2012
- njworm
- NovaLite v3.0

- Nuclear RAT 2.1.0
- Orion RAT 0.9 Free
- Pandora RAT V1.1

982

- Paradox RAT
- Proton 1.1.0.6
- puppy-master
- Poison Ivy
- Quasar 1.1 + Source
- QuasarRAT v1.3.0.0
- Rabbit-Hole Autoit RAT v1.0 Beta 2
- Revenge RAT v0.1
- SkyWyder 2.2
- Spycronic 1.02.1
- Spygate 2.6
- SpyGate-RAT 3.3
- SpyNet 0.7 Public
- Spy-Net v2.6
- Turkojan 4.0 Gold
- ucuL v1.1

- Vantom RAT
- Virus Rat v8.0 Beta
- Xena Rat 2.0
- xRAT 2.0

Related domains and IPs known to have participated in various APT (Advanced Persistent Threat) and Remote

Access Tools (RATs) type of malicious and fraudulent campaigns throughout 2015-2019:

Historical OSINT - Dancho Danchev's Media and News Coverage - 2008-2013 (2019-09-20 17:25)

Dear blog readers I wanted to take the time and effort and summarize all the currently related news media articles

referencing me and my research throughout the period - 2008-2013 and wanted to express my gratitude to everyone

who approached me seeking my assistance in an upcoming news article including those who participated in the

search for me circa 2010 and I wanted to let everyone know that users interested in approaching me regarding

potential news stories including conference presentations and possible threat intell requests can approach me at

disruptive.individuals@gmail.com

Stay tuned!

Research and News Articles covering my research and referencing me throughout - 2008:

- [1]Russian hacker 'militia' mobilizes to attack Georgia
- [2]Fraudsters Target Facebook With Phishing Scam
- [3]Fake Microsoft e-mail contains Trojan virus
- [4]Hackers expand massive IFRAME attack to prime sites
- [5]Hackers infiltrate Google searches
- [6]Hackers expand massive IFrame attack to prime sites

1017

- [7]Hackers knocked Comcast.net offline
- [8]Adobe investigates Flash Player attacks
- [9]High-tech bank robbes phone it in
- [10]Attackers booby-trap searches at top Web sites
- [11]Carpet bombing networks in cyberspace
- [12]Storm worm e-mail says U.S. attacked Iran
- [13]India's underground CAPTCHA-breaking economy
- [14]Domain Name Record Altered to Hack Comcast.net

- [15]Google searchers could end up with a new type of bug
- [16]Ongoing IFrame attack proving difficult to kill
- [17]Hackers expand massive IFRAME attack to prime sites
- [18]Danchev: The small pack Web malware exploitation kit
- [19]Danchev: Massive SQL injection the Chinese way
- [20]CAPTCHAs are dead - new research from Dancho Danchev confirms it
- [21]Hackers infiltrate Google searches
- [22]Massive faux-CNN spam blitz uses legit sites to deliver fake Flash
- [23]Faked CNN spam blitz pushes fake Flash
- [24]Danchev: Anti-fraud site DDOS attack
- [25]Sony PlayStation site victim of SQL-injection attack
- [26]Fake CNN Alert Still Spreading Malware
- [27]Look Ma, I'm on CIA.gov

Research and News Articles covering my research and referencing me throughout - 2009:

- [28]Green Dam exploit in the wild
- [29]"In gaz we trust": a fake Russian energy company facilitating cybercrime
- [30]Don't pay your ransom via SMS
- [31]NYT scareware scam linked to click fraud botnet

- [32]Danchev: A crimeware developer's to-do list
- [33]Danchev rained on my scareware campaign
- [34]Is "aggregate-and-forget" the future of cyber-extortion?

1018

- [35]NYT scareware scam linked to click fraud botnet
- [36]Microsoft declares war on 'scareware'
- [37]Don't pay your ransom via SMS
- [38]Twitter warms up malware filter
- [39]What's really the safest Web Browser?
- [40]With Unrest in Iran, Cyber-attacks Begin
- [41]Zeus bot found using Amazon's EC2 as C &C server

Research and News Articles covering my research and referencing me throughout - 2010:

- [42]Firefox add-on encrypts sessions with Facebook, Twitter
- [43]Watch out for malware with those pretty Mac screensavers
- [44]Months-old Skype vulnerability exploited in the wild
- [45]Danchev: Money mule recruiters
- [46]Cybercrime's bulletproof hosting exposed
- [47]Malware Threatens to Sue BitTorrent Downloaders
- [48]Firefox add-on encrypts sessions with Facebook, Twitter

- [49]Chuck Norris Botnet Karate-chops Routers Hard

Research and News Articles covering my research and referencing me throughout - 2011:

- [50]Kaspersky disputes McAfee's Shady Rat report
- [51]Has EV-SSL Growth Been Slow?
- [52]Report: Vishing Attack Targets Skype Users

Research and News Articles covering my research and referencing me throughout - 2012:

- [53]Fake UPS notices deliver malware
- [54]ZeuS/Zbot Trojan Spread Through Rogue US Airways Email
- [55]New Skype malware threat reported: Poison Ivy
- [56]Five Koobface botnet suspects named by New York Times
- [57]Virtual jihad: How real is the threat?
- [58]Is the death knell sounding for traditional antivirus?
- [59]Can the Nuclear exploit kit dethrone Blackhole?

1019

- [60]Experts split over regulation for bounty-hunting bug sniffers
- [61]Spammers Using Fake YouTube Notifications to Peddle Drugs

- [62]Adele Bests Adderall As Affiliate Spammers Offer Music Downloads
- [63]Bulgarian sleuth unveils botnet operators
- [64]Fake PayPal Emails Distributing Malware
- [65]Web Gang Operating in the Open
- [66]ZeuS/Zbot Trojan Spread Through Rogue US Airways Email
- [67]Buy 500 hacked Twitter accounts for less than a pint
- [68]NBC.com Hacked, Infected With Citadel Trojan

Research and News Articles covering my research and referencing me throughout - 2013:

- [69]How Much Does A Botnet Cost?
- [70]Automated YouTube account generator offered to cyber crooks
- [71]Upgraded Modular Malware Platform Released in Black Market
- [72]Deconstructing the Al-Qassam Cyber Fighters Assault on US Banks

Announcing Law Enforcement and OSINT Intelligence Operation "Uncle George" - Join Me Today!

(2019-10-16 20:16)

Dear blog readers,

Surprise, surprise! I wanted to let everyone know that I've spend a decent portion of my time crawling and

actually harvesting and data mining 78 high-profile public Cybercrime Forum Communities basically consisting of

1M raw OSINT data Web site pages harvested and ready for processing and enrichment. Dare to join the campaign?

Keep reading and drop me a line at ddanchev@cryptogroup.net to coordinate and discuss including details on how

to obtain free access to the 2019 Cybercrime Forum Community Data Set which is basically 18GB comprising of 1M

crawled and harvested Web sites from the most popular Public Cybercrime Forum Communities.

Timeline of the Project including What You Need to Participate with the Ultimate Goal to Track Down the

Individuals Behind These Communities and Actually Take Them Down:

- Drop me a line at ddanchev@cryptogroup.net and let me know that you've downloaded it and that you're

currently interested in participating in the project

- Please coordinate with me what you plan to do with the archive in terms of possible raw OSINT enrichment

and automated Social Network Analysis including sharing it with your Law Enforcement contacts or colleagues

in your organization at dancho.danchev@hush.com

- Grab a copy of Open Desktop Semantic Search - <https://www.opensemanticsearch.org> and process the archive

- Grab a copy of Solr-Powered Local Yacy Search Engine - <https://yacy.net> and process the archive

1025

- Grab a copy of Carrot2 – Open Source Search Results Clustering Engine - <https://project.carrot2.org/> and connect it with Solr-Powered Local Yacy Search Engine and start processing the results and share the results with

me at dancho.danchev@hush.com

- Grab a copy of the following Statistical graphs generating tool - <https://github.com/ko-ichi-h/khcoder> and begin

working on the archive

The Objectives List:

- Gather as much evidence for participation in fraudulent activity and shut down the community

- Collect as much personal information as possible including IoCs (Indicators of Compromises) Web site URLs

including personal IM accounts and personal email addresses

- Publicly publish the results of the crowd-sourced raw OSINT enrichment project campaign and ask everyone to

reach out to their contacts in U.S Intelligence Community and international Law Enforcement to share the data

and actively participate in the actual prosecution of the individuals behind these Cybercrime Forum Communi-

ties and the actual take-down process

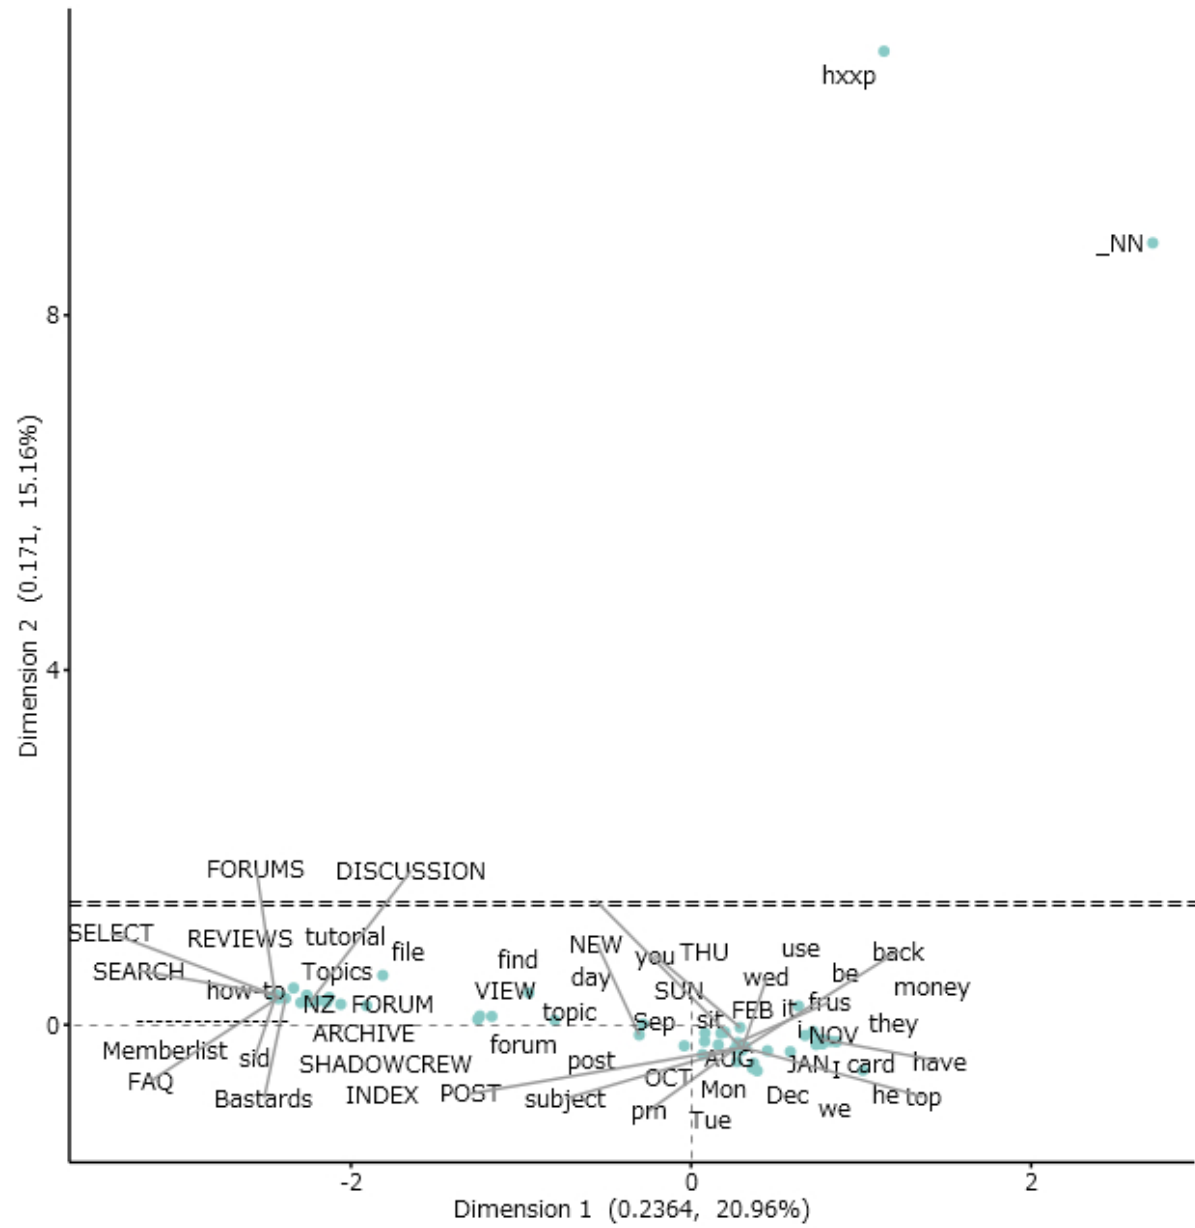

- Share the data-set with as many academic Security Industry U.S Intelligence and international Law Enforcement contacts as possible

Drop me a line at ddanchev@cryptogroup.net and let's get the campaign going!

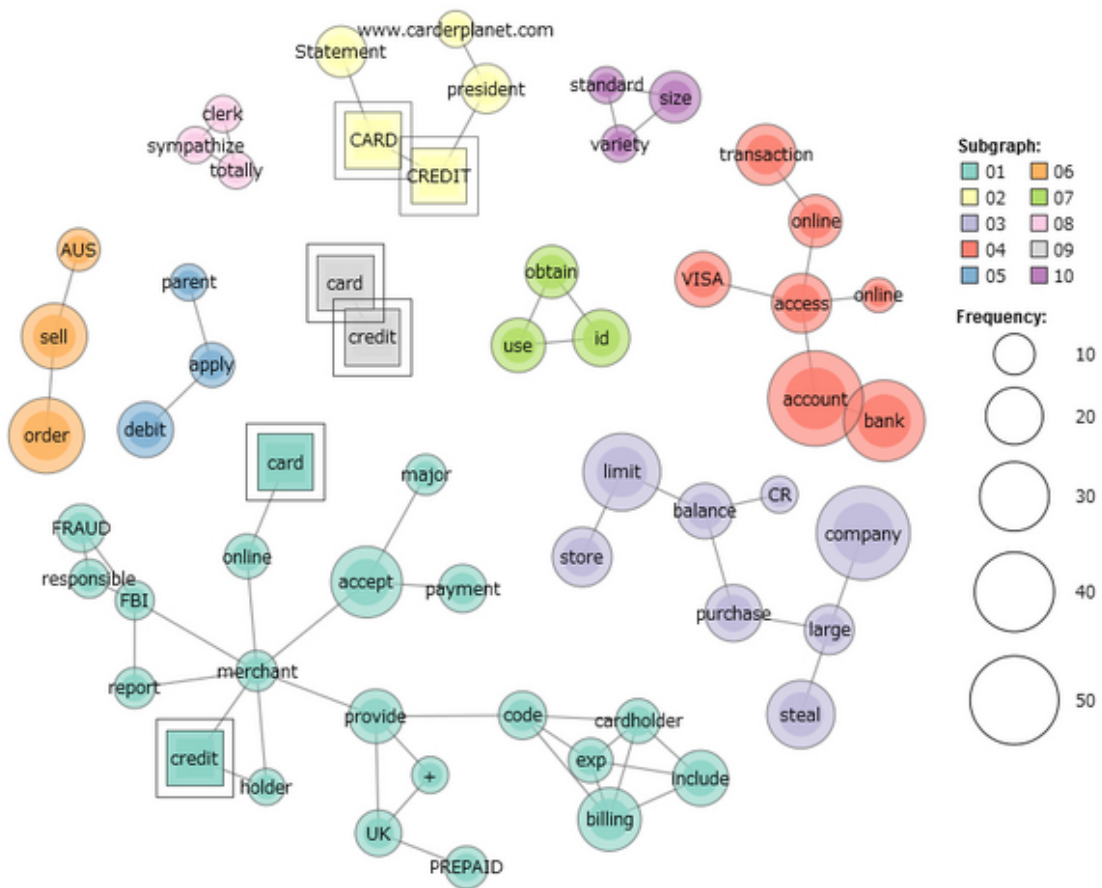

The results? Check out the following enriched raw OSINT graph which I managed to create for research pur-

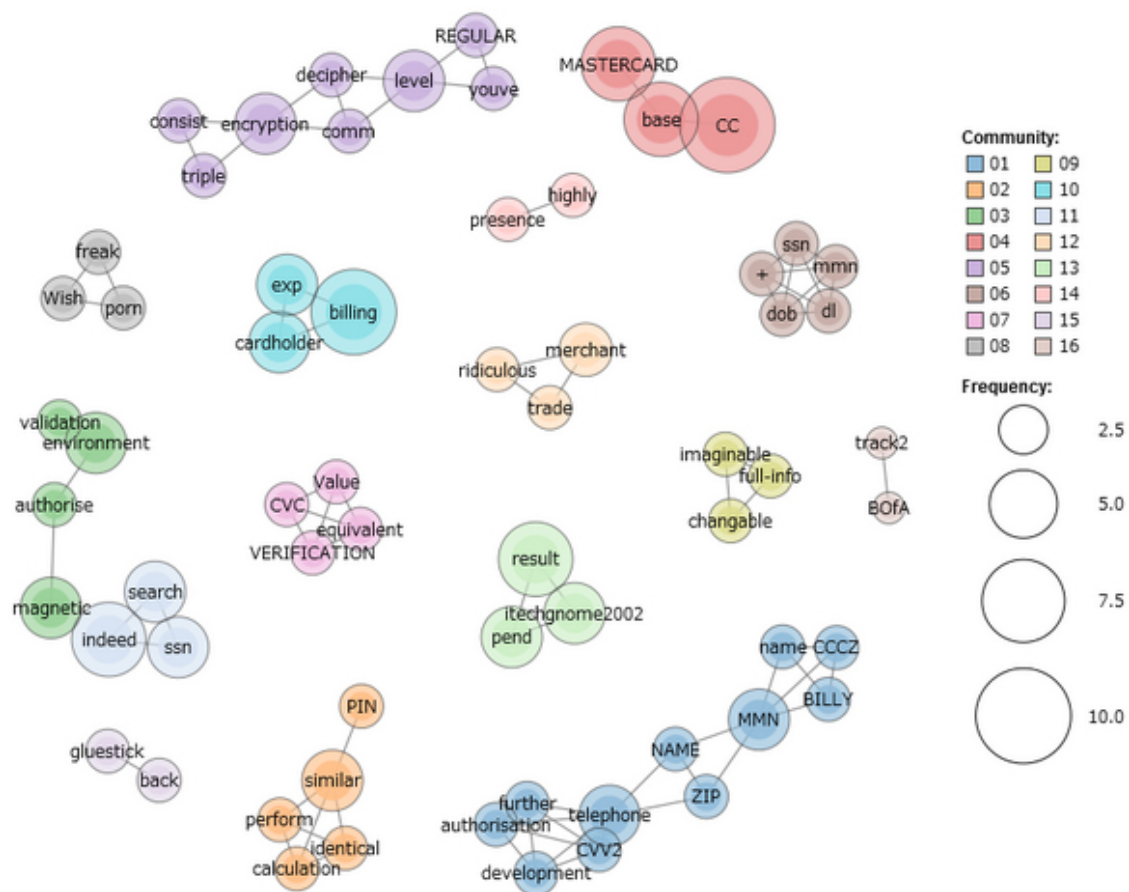

poses and to motivate you to participate.

New Commercial Security Research OSINT Cybercrime Research and Threat Intelligence Gathering Ser-

vices Portfolio Available On Demand! (2019-11-02 18:14)

Dear blog readers,

I wanted to let everyone know of a currently active commercial portfolio of services that I'm publicly offering

for the purpose of reaching out to colleagues and friends including companies vendors and organizations who might

be interested in working with me for the purpose of obtaining access to never-published before Security Research

analysis reports briefs podcasts and various other commercially obtainable virtual and cyber assets that you and your

organization can take advantage of.

Approach me at - dancho.danchev@hush.com today to discuss!

Key Commercial Services that I'm currently offering include:

1070

- [1]**Security Services**
- [2]**OSINT Services**
- [3]**Hacking Services**
- [4]**Intelligence Services**
- [5]**Geopolitical Services**

Including the following commercial services available on [6]Patreon Community:

- Real-Time Security Consultation
- Security Newsletter
- Cybercrime Blog Post

- Security Podcast
- Malware Analysis
- Threat Intelligence Analysis
- Security Workshop
- OSINT Analysis
- Geopolitical Analysis
- Threat Actor Profiling
- National Security Analysis
- Cyber Jihad Analysis
- Dark Web Intelligence and OSINT Analysis
- Security Presentation
- Cyber Security Business Development
- Red Team Penetration Testing Assessment
- Blue Team Penetration Testing Assessment
- Target of Opportunity Targeting
- Cybercrime Forum Monitoring
- Underground Chatter Monitoring
- Network Deception Consultation
- Military Scenario Building

- Cyber Warfare Scenario Building
- OSINT Enrichment and Data Mining
- Cyber Warfare Program Estimation
- Weapons System Analysis
- Cyber SIGINT and Cyber Assets Discovery

Stay tuned!

New Cybertronics - VR for Hackers and Security Experts Dark Web Onion Address (2019-12-02 10:15)

[1]

Dear blog readers,

I wanted to let everyone know that I've recently changed the official Dark Web Onion address for my Cybertronics -

VR for Hackers and Security Experts Project including the actual Bitcoin donation address.

Got Bitcoin? Consider going through the project proposal today - **[http://lkzihepprlhxtvbutjedozbsqd4avmif-](http://lkzihepprlhxtvbutjedozbsqd4avmif-hpjms3zuq7itceiu4qajwad.onion/)**

[hpjms3zuq7itceiu4qajwad.onion/](http://lkzihepprlhxtvbutjedozbsqd4avmif-hpjms3zuq7itceiu4qajwad.onion/) including to make a possible Bitcoin donation using the following Bitcoin Address:

3J8Jt7XCBGtCL6XRLTWhKfRQBmhhqGs4aP

I wanted to say a big thanks to everyone who approached me in terms of the project including to actually

make a donation. The official schedule release is scheduled for January, 2020 and I'll make sure to keep everyone

posted on current and future project updates.

Stay tuned!

World Hacker Global Domination Group

-Est. 2019-

**Official World Hacker Global Domination Group
(WHGDG) Dark Web Onion Launch! (2019-12-02 10:16)**

Dear blog readers,

I've been spending more time on the Dark Web these days including the active launching of a second Dark

Web Onion and the official launch of the World Hacker Global Domination Group (WHGDG) which is basically a Call

for Papers Call for Participation and Call for Innovation request on behalf of me for the purpose of reaching out to

the U.S Intelligence Community as an independent contractor for the purpose of presenting and eventually getting

funding for a variety of commercial cyber security and hacking including Threat Intelligence and Offensive Cyber

Warfare Projects including the active recruitment of new members.

Check out the Official Dark Web Onion:

<http://nexvibpe4xszfx4cp2jldkdyhnjnah5qnckoagoiry3vpyv5eheh55id.onion/>

and don't forget to visit Cy-

bertronics - Virtual Reality Social Network for Hackers and Cyber Security Experts Bitcoin-accepting Project -

<http://ca7brwpxmnbssdoh4dfoijyr7zwetob74x3berlvmeeekhmkt7zcjdjqd.onion/> and donate today!

How you can participate?

- Visit the Dark Web Onion and go through the Call for Participation Call for Papers and Call for Innovation and

approach me at ddanchev@cryptogroup.net in case you believe that you can contribute with knowledge data

1075

and expertise including the technical "know-how" to participate in any of the Key Points mentioned in the Dark Web Onion

Stay tuned for a major Web Site update by the end of the week including the production of an extremely popular Security Podcast Security Vlog and an additional set of never-published before possibly classified and sensitive Technical Data and Cyber Security and Hacking resources. Enjoy!

g0t Bitcoin? - Part Two (2019-12-04 18:15)

Dear blog readers,

I wanted to let you know that I've recently changed to a permanent [1]**Dark Web Onion** address - for my

[2]**Cybertronics - Virtual Reality Social Network for Hackers and Security Experts** where I'm currently soliciting

Bitcoin donations for the purpose of launching the project in January, 2020.

Got Bitcoin? Consider visiting the Dark Web Onion and making a donation today and stay tuned for the up-

coming updates and actual launch of the project in January, 2020 - **[http://lkzihepprlhxtvbutjedoazbsqd4avmif-](http://lkzihepprlhxtvbutjedoazbsqd4avmif-hpjms3zuq7itceiu4qajwad.onion/)**

[hpjms3zuq7itceiu4qajwad.onion/](http://lkzihepprlhxtvbutjedoazbsqd4avmif-hpjms3zuq7itceiu4qajwad.onion/)

Stay tuned!

Announcing New Hacking Security and Hacktivism-Themed Online Forum Community! Join me Today!

(2019-12-12 19:00)

IFRAME: [1]https://www.youtube.com/embed/naiklItDK1w?feature=player_embedded

Dear blog readers,

I've recently launched an extremely popular and comprehensive Hacking and Security possibly Hacktivism-Themed

Online Forum Community called "[2]**Security is Futile**" using the extremely popular [3]**PlushForums** Platform consisting of over 193 Hacking and Security Topic Categories.

The initial idea behind launching the community is to spread data information and knowledge and to provoke

discussion into various hot Hacking and Security topics including to solicit high-profile VIP Hacker and Security

Experts to actually join the community and contribute with content.

Official "Security is Futile!" Hacking and Security Forum Community URL:

Announcing Law Enforcement and OSINT Intelligence Operation "Uncle George" - Join Me Today! - Part

Two (2019-12-12 19:12)

Dear blog readers,

I wanted to let you know that I've been spending more time doing active Security Industry outreach in terms

of the [1]**2019 Cybercrime Forum Data Set** and that I've already started working with several vendors in terms of

possible OSINT enrichment and actual processing of the data.

Perfect timing to say thanks to **Ilya Timchenko** and **McAfee** for actually reaching out and managing to process

the following artifacts from the actual Data Set which I've decided to publicly share with everyone who reaches out and expresses interest in working with me on the Data Set with the idea to possibly assist the Security Community and Law Enforcement in terms of tracking down the individuals behind these campaigns and actually shutting them down.

Possible Personally Identifiable Artifacts Found in the Actual Data Set Include:

- [2]**Cybercriminal Cryptocurrency Addressess**
- [3]**Cybercriminal Emails**
- [4]**Cybercriminal ICQ Numbers**
- [5]**Cybercriminal Phone Numbers**
- [6]**Cybercriminal QQ IDs**

1082

- [7]**Cybercriminal Telegram IDs/[8]Telegram IDs**
- [9]**Cybercriminal Dark Web Onion Addresses**
- [10]**Cybercriminal Viber Accounts**
- [11]**Cybercriminal VK Accounts**
- [12]**Cybercriminal XMPP Accounts**

Including the following massive update courtesy of me including all the publicly obtainable [13]**Email Addresses**

obtained from the 2019 Cybercrime Forum Data Set including all the publicly obtainable [14]**IP Addresses**

obtained

from the 2019 Cybercrime Forum Data Set which appear to be mostly Socks4/Socks5 and publicly accessible

compromised hosts used for "island-hopping" tactics.

I'll be posting an updated set of analysis and data regarding the currently ongoing [15]**Law Enforcement and**

OSINT Intelligence Operation "Uncle George" anytime soon.

Approach me at ddanchev@cryptogroup.net in case you're interested in working with me on this project or

want to obtain access to the actual Data Set for possible OSINT enrichment and research purposes.

Stay tuned!

Happy Holidays! (2019-12-23 20:08)

Dear blog readers,

It's been a pleasure and an honor to serve your needs since December, 2005 when I've officially opened this

blog while working as a Managing Director for Astalavista.com - The Underground and I sincerely hope that you'll

continue to find my research informative and quality enough to further recommend my personal blog to friends and

colleagues including to possibly approach me in terms of seeking additional information regarding a particular blog

post or to actually "say hi" and "keep up the good fight" type of message.

My 2020 primary contact points include:

Personal Email - ddanchev@cryptogroup.net

Social Media Accounts - [1]Twitter, [2]LinkedIn, [3]Facebook, [4]Angellist, [5]YouTube, [6]Medium

IM and Skype ID: [7]dancho _danchev _

Web properties that I'm currently running include - [8]Offensive Warfare 2.0 and [9]Unit-123.org

XMPP/OMEMO ID for Real-Time Conversation:

90184@armadillophone.com which is basically compatible with

[10]ChatSecure [11]Conversations and [12]Dino - feel free to install any of these applications in case you're not using

1084

them already and feel free to "say hi".

Happy holidays and thanks a lot for everyone who's been keeping in touch and keeping up the good fight!

Stay tuned!

Exposing High Tech Brazil Hack Team Mass Web Site Defacement Group - An OSINT Analysis

(2019-12-27 15:38)

It's been a while since I've last posted on quality update further detailing the inner workings of a high-profile and

prominent Web Site Defacement group that has managed to successfully compromise thousands of Web sites

internationally that also includes Bulgaria's National Security Agency (DANS) - hxxp://dans.org Web site.

In this post I'll provide actionable intelligence including personally identifiable information on the people and

the gang behind the campaign including an in-depth analysis of their tactics techniques and procedures including

personal photos and social media accounts of the infamous High Tech Brazil Hack Team whose responsible for having

successfully defaced over 5,000 legitimate Web Sites internationally.

Team Members Include:

- crazyduck - Real Name: Fabian de Souza Peralazzo
- otrasher - Email: Otrasher@live.com - Social Media Account
- https://twitter.com/b1tchx_
- I34NDR0
- wicked
- live

- Smoker

Sample Photos of High Tech Brazil Hack Team Team Members:
